Effective Date: 09/19/2025 11:05 Type: Physician Note

Note Text : The resident's liver enzymes have been slightly elevated. Repeat blood confirmed that the levels haven't gone back to normal. The resident denies having any abdominal pain, she doesn't have any signs of jaundice and states that her gallbladder has been removed in the past. An abdominal ultrasound will be ordered to assess if any on going causes. If the results are normal, the elevated levels could be caused by medications and changes might have to be done.

Effective Date: 09/09/2025 20:01 Type: Family/Resident Involvement

Data : Writer received a call at approximately 1700 from son Peter. Son mentioned that resident had called him and informed him that she had no tenant briefs in her room and that staff could not toilet her because of lack of products.

Action : Writer spoke with PSW staff and was informed resident had 8 tena "back up briefs" in her bathroom cabinet but was refusing to let staff utilize a brief stating they were for emergencies. PSW staff told resident that once dinner service was completed writer or RCM would go down to get more tena, however they would have to use the brief in her room for now. Resident refused to be toileted and refused to come for dinner. Resident also contacted her son. Writer informed son that resident did have extra briefs but refused to utilize them until writer had an opportunity to go and get her more. Son understood and asked that going forward maybe have PSW more aware if resident was running low of her "non emergency stock".

Response : Residents dinner was saved and resident called PSW staff at 1730 and agreed to use 1 out of the 8 briefs she had in her room and asked to be toileted, which PSW staff did immediately. Resident came down to the dining room after being toileted for dinner.

Author:Ashline Johnstone RESP - Nursing - Behaviour Support Manager

Signature: _____

Effective Date: 09/05/2025 12:29 Type: Family/Resident Involvement

Data : The Writer was approached by the resident just prior to lunch asking if the Writer has spoken to her son. The Writer asked why, to which she responded 'about our situation'. The Writer asked about which situation she was referring to, she replied 'about the room change'. The Writer reiterated the conversation had yesterday with the resident, to which the resident responded 'I'd call Peter if I were you', smirked at Writer and then turned away.

Action : The Writer and co-nurse (T.S) attempted to call Peter (son) twice with no response. The Writer did leave a voicemail stating it was not an urgent phone call but that Writer would like to connect today before 4pm. The Writer did also leave a call back extension for him to call.

Response : Pending response at this time.

Effective Date: 09/04/2025 12:51 Type: Family/Resident Involvement

Data : The resident approached the Writer just prior to lunch, stating she was speaking with the co-resident (M.A)'s husband. The resident began to relay information shared by the co-resident's husband regarding interventions implemented by the home that are not relevant to the resident and her care. The Writer stopped the topic immediately, expressed that the Writer would not continue with the conversation relating to a co-resident's personal information/care. The Writer validated the resident's concern and explained the importance of confidentiality within the home and dignity of others; the resident then replied 'well that's just ignorant'. The Writer apologized that the resident felt frustrated with the response but that no details of other residents can be discussed with her. The resident then asked about a room change due to not liking her roommate; The Writer explained that at this time we do not have any open rooms for her to move to, however, the admissions coordinator and social service coordinator are aware of this request and will make the accommodation as soon as they have availability. The Writer also explained that there is no guarantee on who the new roommate would be which could furthermore land the resident in the same position as she's currently in, but that we'd try our best to accommodate and arrange for a roommate who would be a good fit; resident ok with this.

LATE ENTRY

Data : The resident has had a 1:1 in place during the hours of 8:30am and 4:30pm following discussions had with the resident's Son (SDM) and Granddaughter related to concerns brought forward. The resident's husband has now voiced feelings of distress with the 1:1 in place and monitoring interactions. Following the initial implementation of 1:1 supervision, education had been provided to the family and the husband of the resident which all agreed upon to implement. Since having increased supervision in place, it was decided to remove the 1:1 supervision at this time as no interactions of concerns have been brought forward, the monitoring has developed distress of the resident's husband, and has been requested by the family at this time to remove.

Action : As a way to continue to ensure staff are being mindful of interactions for safety of the resident, we've initiated pro-active hourly check-ins with PURPOSE, ie. knocking on door, offering coffee, putting laundry away, ordering lunch, etc.

Response : The ED has connected with the family to provide an update.

Effective Date: 09/03/2025 10:02 Type: Physician Note

LATE ENTRY

Note Text : Assessed on medical rounds. Resident continue to demonstrate BPSD, with some repetitive loud vocalization of "mama". Coresident's and family members noted to be disturbed by this behaviour. Resident has been observed to do this while seated at the table in the dining room. For agitation she is on Risperdal 0.125 mg po bid and prn. At the time of rounds today, she was alert, seated quietly, appeared calm and comfortable. Color okay, resps easy and regular. Glycemic control reviewed, BS have improved, recently between 6 and 8.

For BPSD with loud repetitive vocalization I have requested behaviour tracking with DOS in an effort to identify patterns, possible triggers. Behaviour management coordinator aware, possible BSO involvement. Further evaluate non-pharmacological strategies, possible triggers such as needing the toilet, hunger, etc before pharmacologic adjustments.

Effective Date: 09/29/2025 10:04 Type: Physician Note

LATE ENTRY

Note Text : Assessed on medical rounds. Recently, resident noted to have some blood per rectum. Initially blood was noted with a bowel movement and subsequently blood had been noticed on her incontinence product. She does not have a history of lower GI diagnoses or GI bleed. She is not on a blood thinner. Bowel movements documented as regular, stools usually soft to formed. She had no apparent pain, intakes stable.

O/E resident was seen resting quietly in her bed. Eyes open, nystagmus noted, pupils somewhat fixed and dilated. She was not able to answer any questions pertaining to vision, and did not seem to have any response to sudden movements in her near field of vision. Abdomen soft and benign. No visible abnormalities on assessment of anal lesion. Skin intact. No bleeding at this time.

Update provided to POA/son by phone. Rectal bleeding quite possibly related to hemorrhoids, but cannot rule out other underlying etiology including more serious diagnosis such as malignancy. Son aware. Given impression of chronic disease, frailty, dementia, etc., POA identified that conservative management in the home with a focus on palliative approach and comfort are the goals for this resident at this time. No aggressive investigations or interventions, and plan for care in the home rather than transfer to hospital should her health condition decline. We also reviewed resident's vision. Sometime ago, there appeared to be ocular erythema but resident was persistent about keeping her eyes close, and further assessment was not possible. POA wished for conservative approach/expectant management. At this time, it appears that resident has had significant vision loss and is likely blind. POA indicates that he does not wish to proceed with further investigations such as via optometry/ophthalmology assessment.

Lower GI bleed, likely hemorrhoids. Monitor for any further health concerns. Significant vision loss. Palliative approach. Dictated by Dr. Lee Andersen dictated but not read

Data : PSW reported ,that she found resident broken glasses on the floor.

Action : Writer called POA to inform . PoA said her mum supposed to have two glasses so I told psw to check in her room if they can find another pair . I checked by my self as well but there is no another pair of glasses. The writer called POA again ti inform thatthere is no extra pair . POA said that's okay he will see when he can visit her mom

LATE ENTRY

Note Text : Assessed on medical rounds. Recent complaints of vaginal itch and some vaginal discharged noted by PSW staff on one occasion. No ongoing discharge has been noted. Pain scores remain variable, with numerical pain scores 0 to 8, and PAINAD score 0. PRN Hydromorphone is being used 0 to two times per day, most often at night. She continues on Hydromorph Contin 6 mg po bid and Tylenol 1 gram tid. Recent weight and VS stable. Recent blood sugars okay. Documentation of fluid intakes not complete, however urine outputs appear adequate and recent bloodwork okay (CBC and LUC).

Resident seen in her room, resting on her bed. She appeared calm and comfortable as per her usual, alert, interactive. Color okay, resps easy and regular.

Regarding vaginal itch, vaginal swab to rule out candida has been ordered. In an effort to improve pain management, Tylenol will be changed from tid to 650 mg po qid, plus one additional dose of Tylenol during the night if needed. Routine Hydromorph Contin and prn Hydromorphone also remains in place and pain will continue to be follow.

Effective Date: 09/04/2025 10:02 Type: Physician Note

LATE ENTRY

Note Text : Assessed on medical rounds. Resident has been monitored regarding pain, on pain tracking, with routine and prn analgesics. Recent pain related to vertebral compression fracture. Pain scores remain somewhat variable with numeric scores 0 to 8, and PAINAD scores 0. Overall, scores appear to be improved. Resident reports back pain is improved. She reports abdominal discomfort at times which she attributes to Foley catheter. Nursing notes indicate recent complaints of discomfort in the urethral/vaginal region on August 31st attributed to catheter. Today she reports she had some abdominal pain when she sneezed, again she is concern that it is related to the catheter. Intakes have been good. Catheter function good. Sleep have been monitored and overall sleep pattern appears good.

Recent VS stable. Resident seen in bed, lying flat on bed, supine with no pillow. She indicates (she is in this position due to abdominal discomfort). She was alert and interactive. She appeared comfortable and in no distress through our conversation. Color normal. Mucus membranes moist. Resps easy and regular. Abdomen obese, soft and benign, however reported tenderness with palpation in various locations, left and right side. Foley catheter draining yellow urine. Left leg shows chronic edema, chronic skin changes, with no appreciable change. BS reviewed, between 6 and 12. Recent bloodwork reviewed, CBC and LUC okay, CRP 34.6.

Back pain related to vertebral compression fracture improving. Continue current management. Due to chronic leg edema, resident would benefit from continuation of fluid restriction, 2 liters per 24 hours. Abdominal discomfort, possibly MSK versus UTI or other etiology. Foley catheter will be changed, and resident continues on Tobramycin IM for pseudomonas UTI. Continue to monitor vitals bid and reassess in one week. Ultrasound of the abdomen has been ordered. Weekly bloodwork. Sleep tracking discontinued. Based on random BS greater than 11, diagnosis of Type 2 diabetes noted. Alc will be follow every three months.

Effective Date: 09/03/2025 10:02 Type: Physician Note

LATE ENTRY

Note Text : Assessed on medical rounds. Resident recently received supplemental hydration with hyperdermaclysis due to poor intakes, and received antibiotics for possible UTI based on positive urine results. However, following this treatment, she did not have a meaningful improvement in her functional abilities, quality of life and intakes remain generally poor with respect to food and fluids. Over the weekend some refusal of medications were noted. Over night last night, no urine output noted, and small amount of brownish discharge noted on her brief.

O/E resident was resting quietly in bed. She opened her eyes to verbal stimulus and provided minimal verbal responses. She indicated that she was okay and denied pain. She appears thin and fragile but appears comfortable and in no distress. Pupils equal, extra ocular movements conjugate, face symmetrical. Resps quiet and easy. Normal breath sounds audible bilaterally with no adventitial sounds heard. Pulse regular, rate normal. Skin warm and dry. Abdomen benign.

Update provided to POA/Karen, with discussion. Due to resident's fragile health condition, advanced dementia, no significant improvement after recent treatment, limited quality of life, identified goals are for palliative care at this time.If resident is demonstrating signs and symptoms of an acute condition that could be treated, reversed medically, POA would like to proceed with treatment.

At this time, advanced dementia with fragility, poor intakes and significant decline. No signsof acute illness. Continue to monitor health condition, palliative approach to care, comfort measures if needed.

Effective Date: 09/04/2025 08:32 Type: Physician Note

Note Text : As per the nursing notes, the fungal rash on the resident's penis has resolved, will discontinue CLOTRIMAZOLE. Had special care review, some concerns about choking, reflux and aspiration. Every visit done to the bedside showed multiple food items like butter tarts, Pepsi, chocolate etc. that could aggravate his reflux. Education has been done multiple times and both the POA and resident refuse to follow the recommended diet. Unfortunately, the PPIs play a limited role when the diet is not followed. We will continue to support the resident's choices and continue to monitor to see if any worsening.

Diagnoses : Parkinson's disease(G20), Tremor, unspecified(R25.1), Rheumatoid arthritis, unspecified(M06.9), Arthritis, unspecified, multiple sites(M13.90), Unspecified dementia(F03), Pathological fracture, not elsewhere classified, unspecified site(M84.49)

stomach.

At the time of rounds resident was alert, seated in wheelchair, no specific health concerns voiced. She did gesture to her stomach as per her usual. Color normal, mucus membranes moist. Resps easy and regular. Abdomen soft and benign.

Monitor for any further problematic BPSD, currently on behaviour tracking. Monitor for any symptoms of concern or any other health condition, and abdominal x-ray has been ordered to assess for possible constipation. New medication orders provided by on-call, including Seroquel and Zopiclone, were discontinued. Urine testing also discontinued as resident is not demonstrating any signs or symptoms specific for UTI.

LATE ENTRY

Note Text : Assessed on medical rounds. Resident noted to have some blood with urine on incontinence product recently. Recent U/S showed some increased post-void residual but no other specific abnormalities. Urine C&S in August showed mixed growth, and urine from September 5th showed no growth. Laxatives recently increased due to constipation. Over the past couple of days, she has been having several soft bowel movements.

O/E resident was alert, seated in her chair, answers questions as per her usual. Color okay, mucus membranes moist. Resps easy and regular. Abdomen soft and benign. Recent CBC normal.

Recurrent hematuria. Possible UTI/hemorrhagic cystitis, however recent urine culture have been negative. Urine R&M has been ordered to confirm hematuria, possible other underlying urinary tract abnormality. Await results of R&M, plan for family meeting to discuss next steps, goals of care. Constipation improved on current interventions. Follow.

LATE ENTRY

Note Text : Assessed on medical rounds. Due to concerns regarding left ear discharge/wax. Order was provided to flush left ear for wax removal, following assessment with otoscopy last week. Otoscopy showed tan/brown accumulated matter in external auditory canal appearing consistent with cerumen. Visualization of the TM was limited, but partial view indicated no concerns. Upon flushing ear, nursing staff noted that water did not collect in collecting basin, but instead drain rapidly from resident's nose. Resident did not indicate any pain or significant discomfort. This was reported to the POA, who indicated that resident has not experienced similar in the past. Today resident reports that soft food or fluids some times come out of her nose when she is attempting to eat/drink. POA indicate that she experienced this long standing, and it is not new.

Resident today reports some discomfort in her buttock as well as ongoing discomfort in her stomach.

Resident was seen alert, seated in chair, appeared calm and comfortable. Otoscopy revealed a small amount of tan/brown material in external auditory canal which again appears consistent with cerumen. Visualization of the TM was slightly limited, with the appearance of some cerumen/debris in front of the TM. No defect was visualized. Mouth and oral pharynx unremarkable. Abdomen benign, some lower abdominal tenderness reported with palpation.

Abdominal x-ray showed fecal loading of the large bowel. Urine culture showed no growth.

Possible middle/inner ear pathology with communication to nasal pharynx. Resident is generally asymptomatic. Offer referral to ENT, but monitoring/expectant management may be appropriate for this resident. Abdominal pain possibly secondary to constipation. Increase Senokot to two tabs routinely and two tabs prn, plus PEG 3350 17 grams po daily. Follow regarding bowel pattern. Also of note, wheelchair seat cushion has been assessed and inflation adjusted. Monitor regarding buttock pain. Consider adjustment of Butran's if ongoing concerns regarding pain.

Effective Date: 09/04/2025 10:04 Type: Physician Note

LATE ENTRY

Note Text : Assessed on medical rounds. POA has expressed concern regarding resident reporting discomfort in her buttocks as well as lower abdominal discomfort. Due to previous concerns regarding left hip pain, resident is on Butran's 5 patch as well as Tylenol routinely. She also has Pregabalin and Hydromorph bid prior to cares.

Resident reports discomfort in her buttocks primarily when she is seated in her wheelchair. She indicates the discomfort is "all over" her buttocks. It is better when she is resting in bed, she also reports some lower abdominal discomfort and dysuria. Intakes have been stable, no vomiting, no concerns regarding bowel pattern. She has a history of UTI.

Due to dark colored discharge from her left ear, Polysporin ear drops were provided by on-call MD. Resident denies any ear pain.

O/E resident was alert, in bed, answers questions. Color okay, slightly pale. Mucus membranes moist, resps easy and regular. Abdomen reveal normal bowel sounds, soft, mild tenderness reported with palpation across the lower abdomen, no masses detected and no peritoneal findings. Skin on the buttocks and perianal area intact with no visible abnormalities, no redness or other findings. Otoscopy shows what appears to be accumulated cerumen, dark in color in the auditory canal.

Assessment and Plan:

Regarding buttock discomfort, I have requested assessment of resident's wheelchair cushion to ensure it is appropriately inflated, and minimize pressure. Regarding lower abdominal discomfort, urine culture has been ordered as well as U/S. Left ear to be flush for wax removal. On follow-up, if concerns regarding pain persists, consideration could be given to increase in Butran's patch. Follow. Dictated by Dr. Lee Andersen dictated but not read

LATE ENTRY

Note Text : Family meeting held today with resident's daughter/POA between 1135 and 1156 as per POA request. She wished to discuss medications, specifically she was wondering about medication for dementia through resources found on line from the Alzheimer's web site. She was asking about cognitive enhancers such as cholinesterase inhibitors and Lamantin. Stages of dementia reviewed, modest benefit of medications reviewed, risks and side effects reviewed, as well as lack of ODB coverage due to advanced dementia and unlikely benefit due to advanced dementia. Questions answered. After discussion, POA expressed understanding that cognitive enhancers would not benefit resident at this time. No other concerns voiced, and she expressed gratitude for the meeting.

expressed she was not happy with intakes.

Action : Writer discussed intakes dating back August 21, 2025. All meals - breakfast, lunch and dinner. It was discussed on how it tracked and medications/supplements were discussed and we also reviewed moms weight over the last 90 days, which shows a steady increase. The POA indicated she had emailed the ED her concerns. We have set up weekly calls and staff are still to follow the POA request when mom is not eating well. Writer also discussed the bruise on the residents arm noting that we have reviewed the care plan and mom at times expresses her dislike for the interventions in place. Will have routine calls with POA

Education has started with staff on encouraging intakes of food and fluids and switching out staff as needed to support with this. Staff are to continue to call the POA and update when intakes are poor

Response : POA happy with this information

Effective Date: 09/02/2025 15:43 Type: Family/Resident Involvement

Data : Writer talked with POA's today regarding the resident fall last evening.

Action : The POA's stated that they notice he is moving around more and though it potentially could be due to pain. They noticed some movements that they described as him resting/sleeping and suddenly he jerks his leg and is wide awake. They also noted that he said to them he feels at times like he is falling when at rest. They are unsure if the involuntary movements are related to that or if due to pain. Writer put through a physio ref for assessment of a Bloster mattress and requested a pain/abdominal assessment be completed and add to DM rounds based on findings.

Response : POA to be updated when more information is available form assessments.

Effective Date: 09/29/2025 10:12 Type: Physician Note

LATE ENTRY

Note Text : Assessed on medical rounds. Resident remains on safety checks with respect to falls risk. She is noted to have loose stools, which is not unusual for her, with a noted diagnosis of IBS. On September 26 and 27, she was noted to have small amount of rectal bleeding. Rectal/hemorrhoid prolapse was noted at that time, and resident is noted to often digitally manipulate/attempt to disimpact stools from the rectal area. No ongoing rectal bleeding have been noted. Recent weight and VS stable. Glycemic controlokay.

Loose stool attributable to IBS. Small amount of rectal bleeding likely related to hemorrhoids and likely digital trauma. Monitor for further concerns.

Effective Date: 09/17/2025 10:11 Type: Physician Note

LATE ENTRY

Note Text : Case conference held today, including resident's POA, myself and ADOC DP. Reviewed resident's recent health condition, goals of care. In summary, after a fall with minor head injury and laceration, resident was transferred to the Emergency Department. Laceration was closed with staples, but due to confusion/agitation she was admitted to hospital with delirium. Possible pneumonia based on x-ray findings, course of treatment with antibiotics completed. Ongoing delirium, confusion, falls risk, poor oral intakes requiring IV hydration. Health condition stabilized and discharged back to Mill Creek. Since her return, signs of ongoing delirium. No focal symptoms. Decline in function/mobility, decline in cognition. Food intakes often poor, 0 to 25% and fluid intakes variable. For pain management she is receiving prn Hydromorphone 0 to 3 times per day, usually effective. Bloodwork and urine culture have been ordered regarding ongoing delirium. Possible triggers for delirium discussed, uncertain prognosis and potentially chronic course of delirium discussed. Goals of care discussed. Due to chronic disease, dementia, and recent decline with delirium, family understand that prognosis for recovery is guarded. Wishes are for resident to receive medical management in the home, and should her health condition decline, she will receive treatment and comfort care measures in the home if needed. Goals of care do not include transfer to hospital. Family expressed wishes to ensure that resident is comfortable, painmanaged, and falls risk reduced.

They are agreeable to current treatment plan, including pending investigations with blood work and urine culture. RD will be involved regarding nutrition and supplementation, and weights will be followed. VS continue to be monitored as well as pain tracking. DP further addressed concerns regarding falls prevention.

Data : Writer called POA and confirmed that Sept 17th at 1030 works for a care conference/GOC and to speak with MD

Action : POA indicated that virtual meeting works best. Writer will send out a link today to both POA's. Writer asked POA about GOC and noted what is currently on file as DNR/no CPR and medical management in the home. POA confirmed no changes to be made that this time. This is why they want the meeting that they would like to look at next steps and if just keeping her comfortable would be in her best interest. POA will speak with her brother, for now everything remain as noted above. Writer updated POA to the change in seat cushion on her wheelchair and that previous geomatrix could have contributed to coccyx pain and that PT will reassess the effectiveness tomorrow. Also noted for the POA was the routine and PRN medication used to treat pain and it is effective. Pain assessment completed along with delirium screening. The DS was completed due to staff noting milky vaginal discharge.

Response : POA was happy and thankful for the update and information.

LATE ENTRY

Note Text : Assessed on medical rounds. It is noted that resident had an episode on September 19 described as a "blank stare" for about one minute which occurred after he had been standing and banging his wheelchair. Decreased tone in the limbs was noted, and resident appeared pale at the time.

On September 22nd, at approximately 1100 hours resident sustained a fall with no apparent injuries and BP after the incident was noted to be 72/45. He was monitored on head injury routine. Resident does have a known diagnosis of orthostatic hypotension, and receives Midodrine in the morning.

Yesterday September 23rd in the evening resident sustained a fall in his room with a scalp laceration. He became agitated when staff attempted to assess VS, and chased staff out of his room, through the corridor and in to the common area. He was not clothed at the time. When given space, resident calmed down and returned to his room. Today, in conversation, resident has a clear memory of these events. He does not remember the circumstances of his fall, but think that he had been sleeping. He describes waking from a deep sleep, finding several

Pharmacy : Medisystem Barrie IMM

Allergies : Ciprofloxacin

Diagnoses : Parkinson's disease(G20), Other hypotension(I95.8), Other and unspecified dysphagia(R13.8), Urinary tract infection, site not specified (N39.0), Dementia in Parkinson's disease(F02.3), Delirium, unspecified(F05.9), Stroke, not specified as haemorrhage or infarction(I64)

people around him and talking. He describes being poorly oriented due to just waking, and states that he became aggravated and chased the staff. He reports that they were laughing and screaming, like it was a game, so he continued to chase them and "over did it". He sat down when he became tired. Resident also spoke about his ongoing difficulty dealing with life changes, chronic disease (namely Parkinson's), moving to LTC, not living in the community with his wife, change in the relationship with his wife, frustration regarding lack of sexual activity. He reports that all of these are upsetting for him, and he continues to struggle with his mood.

Resident also reports constipation with stools being hard, "like small balls". He denied any new health related concerns or symptoms on screening assessment.

VS at the time of the fall last evening were stable. Today resident was seen seated quietly in his room, initially sleeping. After waking, he was lucid and conversational. Color normal, resps easy and regular. No tremor or dystonia noted. Small laceration on the frontal scalp with dry blood.

Assessment and Plan:

Recurrent falls related to Parkinson's disease and orthostatic hypotension. Episodic behaviour related to Parkinson's dementia, environmental triggers. In discussion with resident he indicated that he would like to trial Sertraline to address mood concerns. Sertraline increased from 75 mg to 100 mg po daily. He continues on Quetiapine. Postural VS have been ordered and will be reassess next week, with reassessment of Midodrine dosing at that time. For bowel irregularity/constipation add Clearlax 17 grams daily, and Senokot two tabs routinely plus two tabs prn for constipation.

Pharmacy recommendations/notes with respect to falls risk will be reviewed next rounds, following assessment of postural VS.

Type of Behaviour : inappropriate behavior

Antecedent/Triggers : possible confusion

Describe the behaviour : PSW reported resident tried to kiss her while redirecting resident back to his wheelchair. According to PSW resident was up walking without assistance in the dining room when she tried to redirect the resident he tried to kiss her. She stated when resident sat back in his chair he looked at her and tap his lips with his index finger. According to PSW the resident did apologize later on.

Disruptiveness (Data)/Consequences to the behaviour : none at this time as resident was easily redirected.

Interventions (review/update care plan) (Action) :

Change in medication :

What are the risks and causes : The resident was confused and agitated was observed walking without assistance.

Outcome(s)(Result) : Resident easily redirected and did apologize to the PSW.

Effective Date: 09/05/2025 20:11 Type: Family/Resident Involvement

Data : Writer called POA

- POA believes that the res falls because he passes out, and voiced "He keeps fainting and didn't fall not because of his balance but because he is lightheaded. He gets up and passes out".

- POA is frustrated as she mentioned it to staff before. She added, res has Orthostatic Hypotension and she believes res is not treated properly, when he gets up his BP drops.

Action : - Writer mentioned about MD notes re eye rolling back and light headed that was reported to MD.

- Writer informed about his BP readings (but she still believes that when standing that's the time his BP drops) Writer mentioned that it's challenging to have his BP done when standing as res has involuntary movement and cant stay still when standing.

Response : - She was informed that will advise MD re concern.

- She is still glad at the end of conversation for updating her.

Effective Date: 09/04/2025 19:33 Type: Behaviour - Responsive Behaviour

Type of Behaviour : Physical expressions exhibiting by throwing of items within reach ie. dishes, personal items, shelving unit/dresser etc, and attempts at pushing and/or punching staff. Verbal expressions exhibited by yelling and threatening to injury staff.

Antecedent/Triggers : Writer was informed by Jacob he is frustrated with his health decline and loss of full independence.

Describe the behaviour : At approx 1700 Writer observed Jacob yelling and throwing items in his room at the walls and door. Jacob was trying to push staff members and threaten to injury them. Jacob proceeded to ambulate throughout the unit without use of walker and placed himself on the floor. Writer noted Jacob try to enter co-resident room.

Disruptiveness (Data)/Consequences to the behaviour : Co-resident access to rooms were unavailable due to hallway doors being closed to ensure resident/staff safety.

Interventions (review/update care plan) (Action) : Writer maintained a patient approach allowing Jacob to express what was his trigger. Writer and Nurse Manager (B.A) provided Jacob space by asking staff to keep a distance during his escalated behaviors. Writer offered a drink to which Jacob accepted and ensured he was not in pain or injured himself. Jacob's wife Margaret was called to provide support.

Change in medication :

What are the risks and causes : Resident at risk for injury/fall due to unsteady gait.

Outcome(s)(Result) : Writer and NM stayed with Jacob until he was settled and safe at approx 1800. Writer ensured Jacobs's room was clean and all fall intervention equipment was functioning. Jacob stated he was apologetic of incident and is overall frustrated with the decline in his health. Plan of care ongoing in regards to triggers and interventions.

Substitute Decision Maker notified (if not, explain) : POA Margaret was appreciative of phone call and grateful for staff support to ensure Jacob was safe.

LATE ENTRY

Note Text : Assessed on medical rounds. Due to previous episode of vaginal bleeding, transvaginal ultrasound to assess endometrium was ordered. Further information gathered today. Resident is entirely unsure of her last normal menstrual period. She reports having very irregular periods for which she started taking continuous OCP, she guesses approximately three years ago but cannot clearly remember. She does not recall pathologic diagnoses, surgeries, or concerns. G2 T1 P0, Alc, LI.

Staff notes skin breakdown on the buttocks/thighs.

O/E was tired but able to participate in conversation and answer questions. Color okay, resps easy and regular. O/E of the buttocks reveals patches of erythema with erosion/ulceration bilaterally on posterior thighs near the gluteal creases, and additional areas of erythema with some superficial skin breakdown on the superior/medial buttocks bilaterally closer to the coccyx.

Recent U/S showed increase endometrial thickness of 1.1 cm with increased vascularity of cystic spaces concerning for endometrial carcinoma.

Assessment and Plan:

Perimenopausal/Post-menopausal bleeding. Concerning findings on U/S but uncertain significance as resident's menopausal status is not clear. However, referral will be made to gynecology, which resident is aware and agreeable. For skin breakdown related to MASD and pressure, I recommend use of zinc barrier cream for the MASD on the superior buttocks and cleanse and Optifoam on the bilateral posterior thigh wounds. These will be monitor on wound rounds with dressings checked regularly to ensure that they are intact and clean. I have also requested assessment of her wheelchair, seat cushion, etc. for pressure reduction. Follow.

Note Text : LTC F/U, treated for possible UTI 5 days ago. 2 doses of Fosfomycin. Pt reports "feeling off", difficult to explain symptoms, some stomach fullness, nausea without vomiting. Pt reports diarrhea but staff confirm that Pt is constipated with hard stools. Reports possible some cough and sputum but no change from previous. V/S stable, CBG low with A1C in July at 6.4. Pt also on iron for Hg. O/E: NAD, colour N, RR 18 while patient resting, HR 86, on oxygen, chest shows crackles throughout, ? unchanged from previous, HS normal, no lower limb edema.

A/P: Feeling unwell, ? medication side effects, ? early COPD exacerbation, plan:

- hold Metformin and Lyrica, RA Oct 14th
- increase Senokot back to daily use
- add Prednisone 25mg daily for 5 days
- cont fluids and some intake
- labs requested for Sept 8th, await results

F/U PRN and for routine visit.

Author:Dr.Kerstin Mossman RESP - Medical Services - MD - Physician [e-SIGNED]

Signature: _____

Effective Date: 09/05/2025 17:55 Type: Family/Resident Involvement

Data : Dr Mossman reached back to the home before 1800 and gave some orders, writer explained POA wants blood work and urine culture, he also wants resident to be treated for suspected UTI, writer explained to Dr Mossman that even though resident appeared to have a low energy right now, there are no clinical indications of UTI, resident denied urgency, frequency, dysuria, polyuria. Additionally residents have no fever and no confusions have been noted, resident did say that she was just not hungry. Dr Mossman gave an order to administer 2 doses of Fosfomycin and do urine C+S, she also ordered CBC and Cr to be completed on Monday. She also want strict fluid intake monitoring and she will review it on Tuesday when she comes in.

Action : POA informed, order processed, medication gotten from inbox, IPAC notified, dietary referral completed. Unit nurse informed to complete infection screening evaluation.

Response : Writer got informed consent from POA and he was satisfied with the reply and treatment course at this time.

Resident ate all the food provided by POA tonight and drank well

Medication administered by the unit nurse

Author:Bidemi Adeniji RESP - Nursing - RN [e-SIGNED]

Signature: _____

Effective Date: 09/05/2025 17:38 Type: Family/Resident Involvement

Data : Notified by the unit nurse that resident's POA Mason would like to speak to a manager

Action : Writer approached POA, he expressed that his mum has a low energy and has not been eating well, he said the last time this happened, resident ended up with a UTI, he believes resident may have another one now. He explained that his sister has tried to reach out to Dr Mossman and has not been able to get a hold of her. POA wants blood work and urine culture, he also wants resident to be treated for suspected UTI, writer explained to POA that even though resident appeared to have a low energy right now, there are no clinical indications of UTI, resident denied urgency, frequency, dysuria, polyuria. Additionally residents have no fever and no confusions have been noted, resident did say that she was just not hungry. Writer however assured POA that we would start resident on strict intake monitoring and we would also do a dietary referral, Dr Mossman would also be contacted and if we did not hear back, we will reach out to the On call Dr for orders, however because it's the weekend, we can not have blood workdone till Monday, our only option to having those tests done would be at the hospital. POA IN agreement to call Dr Mossman for now and get further direction, he also went out to get some food for resident to see if she would eat something else.

Writer reached out to Dr Mossman's office and a message was left for Dr Mossman to give us a call back regarding this resident.

Note: This is the normal way we reach out to Dr Mossman, we call leave a message and she gets back to us within the hour. If writer did not hear back from Dr Mossman at 1800, the on call physician will be contacted for additional directives

Response : Awaiting reply from Dr Mossman

Author:Bidemi Adeniji RESP - Nursing - RN [e-SIGNED]

Signature: _____

Effective Date: 09/03/2025 15:17 Type: Family/Resident Involvement

Data : The writer received a call from susan (SDM) at 1230

Action : The resident's SDM called the writer this afternoon and said " I visited my mom and it seems like she is not well, something is going on, I want to do some blood work that needs to be done for my mom. I think it's a symptom of UTI because she was confused"

The writer mentioned to the SDM" I will assess the resident and contact Dr. Mossman" The SDM susan said" I have already contacted Dr Mossman but she is not picking up and mentioned that can home physician can order some blood work for the resident" Thewriter mentioned to the SDM" I will try to contact Dr. Mossman first and if not I will ask in-home physician" The SDM susan agreed.

Response : The writer did talk to the staff regarding resident. The staff mentioned no sign and symptoms of confusion noticed for the resident. The resident is as per baseline. However, resident has foul smell urine when staff providing care.

- The writer informed the incoming nurse M.P.
- Continue to monitor resident with a current plan of care.

LATE ENTRY

Note Text : Assessed on medical rounds. Pharmacy memo has been received indicating that Spirinolactone 25 mg tablets on back order. Resident receives Spirinolactone 25 mg po daily related to CHF. Glycemic control reviewed, BS elevated through most of the days, they are mostly consistently elevated with lunch and supper time.

Due to unavailability of Spirinolactone, order provided for Amiloride 5 mg po daily while Spironolactone unavailable. For improved glycemic control, short acting insulin at breakfast and lunchwill be increase by 2 units at each administration time. Continue to follow glycemic control and reassess in a couple of weeks time, or sooner if concern.

LATE ENTRY

Note Text : Assessed on medical rounds. Resident sustained a fall last evening, with a skin tear to her nose. On call MD provided orders to hold Apixaban. She is being monitored on head injury routine which has been reviewed with no concerns. Activity and function as per her usual, however resident is upset about having had a fall, and is somewhat tearful this morning. Family is in visiting. She denied headache or neck pain and reports that her lip is sore when she smiles or laughs. No oral/dental pain. O/E she was alert, interactive as per her usual but tearful at times. Adhesive bandage present over bridge of nose. Bruising and swelling present to the upper lip. Dentures in place, no apparent injury to teeth or oral mucosa.

Fall with head injury/facial injury. Wound on nose will be follow on wound rounds with nursing interventions. No ongoing bleeding at this time and no concerns on head injury routine so Apixaban will be resumed. Follow.

LATE ENTRY

Note Text : Assessed on medical rounds. Resident reports low back pain at times. He reports that the pain is occasional, chronic. Pain scores between 0 and 7. Recent monthly pain management shows that pain management is effective. He receives Hydromorphone 1 mg po qid routinely, and routine Tylenol. He has been using prn Hydromorphone 0 to two times per day, effective. PRN is often requested in the morning.

Resident also requiring frequent catheter changes. He has an indwelling Foley catheter, 14 French.

At the time of rounds resident was alert, seated in chair, comfortable, joking, and interactive. Color okay, resps easy and regular.

With respect to pain management, resident may benefit from long acting Hydromorphone. Hydromorphone 1 mg qid will be discontinued and initiate Hydromorph Contin 3 mg po bid. Follow regarding pain management. In an effort to improve Foley catheter function and reduce obstruction and need for frequent changes, Foley catheter will be changed from 14 French to 16 French. Follow.

LATE ENTRY

Note Text : POA expressed concerns regarding possible hallucinations, after Quetiapine was changed to prn last month. POA explains that she has been on Quetiapine for a couple of years and since change to prn, POA notes that resident has been talking about seeing people in her room, seeing things crawling on her food and insects in her room. POA also finds that she is more agitated/irritable during phone conversations. He believes that the hallucinations are disturbing for her with a negative impact on her quality of life.

Risks and side effects associated with atypical antipsychotics were reviewed, including increase in cardiovascular risks (heart attack, stroke, cardiovascular death). POA understands and feels that potential benefit for this resident outweighs the risk. Based on Canadian guidelines, further management of BPSD, trial Risperidone 0.125 mg at hs will be added and prn Quetiapine will be discontinued. Monitor regarding BPSD.

LATE ENTRY

Note Text : Assessed on medical rounds. Resident noted to have an acute change in her health condition, functional status today. Staff noted that she required more assistance ambulating to breakfast, and was hunched over the table while at breakfast which is unusual for her. She demonstrated some other unusual behaviour such as licking her toast, following breakfast. She has been sitting in her chair in her room, angled to the left, leaning forward with her face and hands on the left arm rest of the chair. She denies pain, or other complaints. Further information gathered from her POA/son Brian, indicated that she has had a couple of very similar episodes in the past prior to admission to Mill Creek. On one occasion she was transferred to the hospital, where she was found to be dehydrated and possibly with a mild pneumonia.

Quetiapine was recently reduced and changed to prn and she remains on Citalopram 30 mg po daily. Resident's daughter-in-law spoke with her two days ago, stating that she was very pleasant and "chipper" with no concerns regarding her mood, change in cognition or health concerns at that time.

Intakes today were good at breakfast. Overall, food intakes have been good recently and fluid intakes have been fairly good. She does not have a noted history of CVA or TIA. She does have noted AFIB and is on aspirin but no DOAC.

Afebrile, VS stable. Resident seen seated in chair, in position as described above. Resident was not cooperative with full assessment, and

Gender : F

Date :

Date of Birth : 01/17/1935

Physician : Andersen, Lee

Pharmacy : Medisystem Barrie IMM

Allergies : Clarithromycin, Penicillin, Sulfa Antibiotics

Diagnoses : Unspecified dementia(F03), Hallucinations, unspecified(R44.3), Benign hypertension(I10.0), Hypothyroidism, unspecified(E03.9),
Hyperlipidaemia, unspecified(E78.5), Atrial flutter, unspecified(I48.91), Tendency to fall, not elsewhere classified(R29.6), Pain in joint,
shoulder region(M25.51)

would not accept assistance to reposition or transfer to bed. Color okay, no dysarthria, pupils, extra ocular movements, facial symmetry etc
could not be assessed. Gross motor/tone intact in bilateral upper extremities and bilateral lower extremities. Resps easy and regular,
normalbreath sounds audible in the posterior fields. Abdomen benign on limited assessment.

Following my assessment, resident transferred with minimal assistance back to bed. Resident was reassessed while lying in her bed. She
appeared to be resting comfortably, short verbal responses, did not open eyes. Face appeared symmetrical. Mucus membranes moist.
Symmetrical grip strength.

Assessment and Plan:

Acute change in health condition, functional decline NYD, query TIA/CVA or other underlying medical cause. After discussion with POA Brian,
goals of care clarified to include medical interventions and medical investigations in the home, but no transfer to hospital. Orders provided to
monitor VS bid, encourage fluids, monitor accurate fluid intake and outputs, bloodwork, urine culture, prn catheter to collect urine specimen,
chest x-ray to rule out pneumonia. frequent checks for safety. POA agreeable to this plan. Monitor.

LATE ENTRY

Note Text : Assessed on medical rounds. It is reported that resident was noted to have wheezing at times and refuses puffers at times. He has known interstitial lung disease. Orders include Advair two puffs bid. Resident reports that his respiratory symptoms are stable and chronic, and denies any increase in respiratory symptoms. He denies refusal of Advair.

Recent VS stable. Resident seated in wheelchair, appears comfortable, calm and interactive. Color normal, resps easy at rest, no cough, no accessory muscle use. Normal breath sounds audible bilaterally, few inspiratory rales at the bases, no expiratory wheezes at this time. Left calf hematoma wound assessed. Base shows some yellow/green exudate. No surrounding swelling, heat, erythema. Resident denies pain.

Due to noted respiratory signs/wheeze, chest x-ray has been ordered to rule out pneumonia. Salbutamol two puffs q4h via spacer prn for wheeze/dyspnea ordered. For left calf wound, continue with VASHE cleanses/soaks, add Indidine sheet to wound bed, follow with Optifoam changes every two days. Follow.

LATE ENTRY

Note Text : Assessed on medical rounds. 1) With respect to lower leg edema, Lasix recently increased as per cardiology recommendation. She continues to wear tubi grips, and is 1.5 liter per day fluid restriction. She is not compliant with elevating her feet. Recent weight show some weight loss, however pitting edema continue in bilateral lower extremities. POA is requesting use of Coban rather than tubi grip. Arterial doppler ultrasound will be ordered with ABI, to rule out significant vascular disease before considering higher compression. In the meantime, continue same and follow.

2) With respect to BPSD, reports from staff and notes indicate that resident is sometimes anxious, fearful of being along in her room. She sometimes spends much of the night in her chair in the nursing area. Today at the time of rounds, she was in the nursing station when she asked to be taken back to her room "before they get me". When asked, she indicated that she is afraid, and specified "the powers that be". Due to apparent anxiety, paranoia, fearfulness, resident may benefit from atypical antipsychotic. Trial low dose Risperdal 0.125 mg po daily at hs. Monitor regarding behaviour and titrate.

Both of the above were discussed with POA/Kelly by phone, and she was agreeable to the treatment plans. Side effects and risks of

LATE ENTRY

Data : POA spoke to writer over the phone that resident's edema does not seem to be coming out fast enough. POA want's the home to consider putting resident on Coban dressing to manage edema.

Action : Writer went back into the room to attempt to reassess the resident's legs, but she declined any kind of assessment at this time even with encouragement. But the last assessment on thursday reveals bilateral edema that is draining, currently being managed with optilock and gauze wrap, resident is also on a total daily 160mg lasix to manage edema. Writer asked POA if we can look into the coban dressing request on Monday after connecting with Dr L.A. and the wound care coordinator and POA was in agreement. Wound care coordinator informed and Unit nurse will be informed to list this for MD round.

Writer also informed POA that resident's shoes are too tight and appeared to be leaving indentation marks on resident's foot. POA said she noticed that and have ordered a new set of shoes which will be delivered to resident within the next 2 to 3 days

LATE ENTRY

Note Text : Assessed on medical rounds. Resident out to see cardiologist at PACE, Dr. Awan. ECG was completed which showed AFIB (known) with ventricular response rate of 92 beats per minute. Cardiology recommendations were to discontinue Amiodarone and start Bisoprolol 2.5 mg daily, discontinue Ramipril/Hydrochlorothiazide and proceed with Ramipril 10 mg po daily and increase Furosemide to 80 mg po bid. I have note yet received a clinic note, and have requested one.

Resident continues to have poor sleep cycle, up at time during the night, sometime preferring to remain in nursing station, reportedly fearful to be in her room alone. She also has refusal of care at times. Recent monthly pain management shows that pain management is effective. Intakes have recently been good. She has reported itchy back recently, requesting assistance scratching her back and some excoriation noted. According to Resource Nurse, POA/daughter reported that resident has bruising on her back related to scratching.

Most recent weight 92.1 kg representing some weight loss (likely related to diuresis). VS have been stable. Resident seen seated in her wheelchair, alert, appears comfortable and in no distress. Color okay, resps easy and regular. Ongoing bilateral leg edema, slightly improved. Skin on resident's back intact, no rash or erythema, few old fading bruises.

Assessment and Plan:

New orders provided with respect to presumed CHF, with cardiology note pending. VS will continue to be monitor. Continue to monitor weights, with respect to fluid retention and diuresis. Regarding itch, order provided for Glaxal with 1% Hydrocortisone and quarter percent menthol to be applied to back bid and bid/prn for itch. With respect to BPSD, anxiety/fearfulness, for sleep, consideration could be given to low dose Risperidone. This will be discussed with POA in coming weeks if concerns persists.

LATE ENTRY

Note Text : Assessed on medical rounds. Noted to have pain with wound care and repositioning. Over the past several days, resident has developed a significant right sided buttock wound. It initially appeared to be an excoriation with small area of bruising, but has significantly progressed, enlarging in size, with dark discoloration that appeared consistent with pressure injury or hematoma prior to skin breakdown. The area is now open, superficial stage 3, base dark maroon. Mild surrounding erythema, blanchable. Images were reviewed on wound rounds to view progression and also assessed in person. Discussed with skin and wound coordinator. Wound will be cleansed with VASHE, and cover with Optifoam. This will need to be checked frequently depending on location and likely difficulty maintaining intact and clean dressing. Optimize pressure relief. Skin and wound coordinator will be looking in to an air mattress. Pain tracking has been requested, Voltaren added for low back pain and Hydromorphone 0.5 mg po bid prn prior to wound care has also been ordered. Follow.

Data : Writer tried to reach out to POA to express our condolences and left a voicemail. POA returned the writer's call a few minutes later. She expressed that she will not be setting foot into the home to pick up any belongings. POA said that she took all that she wanted and won't be coming back for the rest. She expressed to writer that she is upset with the care that her dad received here and that she felt that Mill Creek knew about her dad having a UTI days before anything was done about it. She talked about not being happy with the care or cleanliness of the home since her dad moved in here. POA said that everyone is aware of her grievances but nothing was ever done. She said thank you and ended the call.

Action : Writer listened while she spoke. Writer told POA to reach out if there is any support that we can offer her during this time. Writer spoke to the ED about the conversation who checked the progress notes for the past 30 days. There is nothing noted of concern.

Response : After offering support, POA said thank you and ended the call.

Data : Writer called POA re resident's fall

Action : -POA was extremely upset and frustrated about the incident, she questioned why Rod keeps on falling. She voiced, it should not be happening.

-She added that the staff don't come on time when his alarm goes off. She said she tried to use the call bell one time and it took time for the staff to answer the bell. She mentioned that the staff shouldn't go on breaks between 12-2pm.

-She also mentioned that the alarms should not be unplugged.

Response : -Writer was sorry about the fall, as the writer mentioned that res kept on transferring himself without assistance and refuses to use the call bell for help. She was informed that Rod is known to go to his room after meals so staff will help and assist him to go to his room and transfer him to bed. (added to the care plan and inservice record initiated)

-She was informed that if staff are on breaks 4 staff are on the floor.

-It was ensured that staff are checking his alarms and working properly.

-Writer again said sorry to her.

Department: All

Resident Name :	MORIN, GLADYS (00982)	Location :		Admission Date :	11/10/2022
Medical Record # :	1400 528 293 DA	Gender :	F	Date of Birth :	08/04/1944
Physician :	Andersen, Lee	Pharmacy :	Medisystem Barrie IMM		
Allergies :	No Known Allergies				
Diagnoses :	Vitamin B12 deficiency anaemia, unspecified(D51.9), Hyperlipidaemia, unspecified(E78.5), Gastro-oesophageal reflux disease without oesophagitis(K21.9), Arthritis, unspecified, other site(M13.98), Atrial fibrillation, unspecified(I48.90), Other chronic pain(R52.2), Benign hypertension(I10.0), Unspecified fracture of neck of femur, closed(S72.090)				

management reviewed, pain scores variable. She receives Hydromorph Contin 6 mg in the morning and 4.5 mg in the evening, plus prn Hydromorphone which has been used 0 to 2 times per day recently. After returning from hospital, resident was requiring increase assistance, including assistance with feeding. Staff expressing concerns that she is more confused, possibly hallucinating at times. POA concerned, requesting assessment. concerns that UTI may not have been fully treated.

On review of progress notes, resident had incident of decrease LOC on September 1st. VS were stable at the time. Some reduced intakes noted.

VS have been stable. Some recent weight loss noted. At the time of rounds, resident was seated in her chair, appeared drowsy. Roused, some verbal responses but dosing/somnolent. No specific complaints voiced. Color normal. Face symmetrical. Mucus membranes moist. Resps quiet and easy, normal breath sounds audible bilaterally with no adventitious sounds heard. Abdomen obese, benign.

Overall decline in health condition since hospitalization for UTI. Possible component of delirium. Recheck urine C&S to rule out refractory/recurrent UTI. In and out catheter prn to collect urine specimen. Reduce Hydromorph Contin to 4.5 mg in the morning, due to apparent sedation/confusion. Monitor VS, bloodwork. Chest x-ray to rule out pneumonia. Follow.

LATE ENTRY

Note Text : Resident recently out for assessment with psychiatrist, Dr. Ali. Noted history of bipolar mood disorder with admission to hospital with mania/depression, especially during the years of 2020 and 2021. She also has been at Waypoint with a history of CNCC. Dr. Ali notes that she has had delusions regarding incontinence/frequent delusions of chicken bones stuck in her throat. On review of Dr. Ali's consultation note, I note inaccuracies in her current medications, including Aripiprazole, Quetiapine and Propanolol being listed as current medications. She is not currently on these medications. Lurasidone was also listed at 40 mg tid, while she is taking it 40 mg po once daily (since admission to Mill Creek). Dr. Ali's note also indicates that she is verbalizing aggressiveness towards Mill Creek staff and often demands multiple bananas. On review with staff, this is not known to be the case. I have requested communication be sent to Dr. Ali to clarify her current medications and recent behaviours (or lack of there of). Dr. Ali did not recommend any medication changes, and his consultation note did not recommend any follow-up.

Data : Cathy wished to speak with writer regarding residents wounds, and the reported maggots from yesterday. Writer, NM A.J, resident and POA Cathy met in the TV lounge to discuss. Cathy had concerns regarding frequency of residents dressing changes and care. She felt that resident was not getting enough dressing changes.

Action : Writer explained that resident should have dressings changed twice daily but up until yesterday, resident refused to have them changed more than once daily, and after showers, did not want his dressings applied until after breakfast for worry that he would miss breakfast. He also refused to have his dressing changed earlier in the AM and refused care and dressing changes from night staff as well,

leaving him saturated in the morning. I let Cathy know that Yvon and I did have a discussion yesterday about allowing the dressing changes twice daily, and the importance of having dressings applied right after showers. Cathy stated that someone told him that he needed to change to evening showers and this was not going to happen because of his preferences. I expressed that this change was not made, and that it would not be made as it was not his wishes. She was thankful for this. Cathy did state that if Yvon was refusing to call her and she would convince him, and that we could let him know that we could call Cathy so that she could talk with him and this may help encourage him to accept care and treatment.

Plan: Dressing changes and care BID at 0600, and 2300 (when resident goes to bed for the night) With the exception of shower days on Wednesday and Saturday AM when his brief will be changed at 0600, then remaining care and dressing change to occur following his shower. If this causes him to run late for breakfast, staff are to remind him that he will have his food served fresh when he arrived. Yvon did agree to this plan.

Response : Cathy was satisfied with the result of this conversation. Writer will follow residents compliance to treatment, update care plan to reflect changes to his routine

LATE ENTRY

Note Text : Assessed on medical rounds. On the weekend she reports feeling tired, reduced oral intakes. Possibly one episode of loose stool yesterday (resident self toilets). She was assessed last week regarding fatigue and bloodwork was ordered. POA has also expressed preference to take resident out for chiropody. Resident reports she previously saw chiropodist before moving to Mill Creek and that she has chronic callouses/ulcer on her left foot. She reports she feels better today than yesterday. Reduced appetite, but taking fluids well. No vomiting, no abdominal pain, no respiratory symptoms or urinary symptoms.

O/E resident was alert, conversational and talkative. Seated in her chair, feet dependent. Color normal, mucus membranes moist. Resps easy and regular. Abdomen soft and benign. Mild edema with pitting component present to bilateral lower legs, and bilateral skin changes with erythema consistent with stasis dermatitis. Plantar aspect of left great toe and ball of foot show some callous, and ulceration. Dry, no signs of infection.

Regarding fatigue, bloodwork previously ordered and pending. Previous notes from previous GI regarding Barrett's esophagus endoscopy have been requested and consider referring for follow-up to local GI. Hem/onc notes regarding CLL also requested and consider referring for local follow-up. Regarding leg edema, she continues on Lasix 20 mg po bid. Tubi grip recommended, elevated feet when possible. Regarding concerns regarding foot care, resident/POA encouraged to go out to chiropody if that is there preference. Regarding poor intakes, accurate intakes have been requested. RD referral nutrition/supplementation. It is noted that resident remains on bid PPI. Increase blood sugars to reduce intakes as resident is on Gliclazide, Ozempic and Empagliflozin. Follow glycemic control. Resident will be monitor closely with VS bid as well as accurate intakes and bloodwork pending.

Resident Name : MUSZYNSKI, ELEANOR MARY (001136) Location : 2 East E220 1 Admission : 06/10/2025
Medical Record # : 7758 538 990 MH Gender : F Date :
Physician : Andersen, Lee Pharmacy : Medisystem Barrie IMM Date of Birth : 02/26/1936
Allergies : Penicillin
Diagnoses : Idiopathic peripheral autonomic neuropathy(G90.0), Other hypertrophic osteoarthropathy, multiple sites(M89.40), Barrett's esophagus(K22.7), Thyrotoxicosis, unspecified(E05.9), Asthma, unspecified, without stated status asthmaticus(J45.90), Polymphocytic leukaemia of T-cell type(C91.6), Atrial flutter, unspecified(I48.91), Postcholecystectomy syndrome(K91.5), Ulcer of lower limb, not elsewhere classified(L97), Diabetic polyneuropathy(G63.2), Type 2 diabetes mellitus with poor control, so described(E11.64), Hypothyroidism, unspecified(E03.9), Vitamin B12 deficiency anaemia, unspecified(D51.9), Primary generalized (osteo)arthrosis(M15.0), Localized oedema(R60.0), Diverticular disease of intestine, part unspecified, without perforation or abscess(K57.9), Incisional hernia with obstruction, without gangrene(K43.0)

resident did not had lunch, offered to bring in her room but resident denied. resident stated I had and 2 and half glass of juice.
DIL wanted to know about recent Blood works reviewed from resident's chart which was done in mid Aug, no concerns from there.
DIL mentioned if resident get assessed by MD, during round, and regarding foot ulcer as well.
writer reviewed recently assessed by Wound care coordinator and current treatment.
DIL wanted to get a referral for podiatry, as she is looking forward to taking resident out for her foot.
Writer ensured that will add concerns in MD binder and close monitor of resident.

Around dinner time writer checked on resident, resident was in her room seated in the bed, resident was having her ensure, writer offered to go out for dinner but resident refused, and said she is not feeling good to eat.
Denied any pain and discomfort, resident had her routine meds. Encouraged fluids, had orange juice x1 glass and currently having ensure.
DIL called and update given.
Action : Unit supervisor aware to monitor resident's intake and encouraged to push fluids.
US listed resident for MD round.
Response : US aware to monitor intake and document the amount of fluid consumed.
Continue to monitor resident

Effective Date: 09/19/2025 12:36 Type: Family/Resident Involvement

Data : The resident's daughter in-law came to visit the resident and later came to the writer this morning

Action : The resident's daughter in law mentioned to the writer that " Eleanor's daughter visited yesterday and she noticed that her foot is soo bad that she can ended up in the hospital because she is diabetic. She need to see the chiropodist" The writer replied that" I am unsure about that the chiropodist is available in house but I can double check with the nurse manager and get back to you" Daughter in law replied" you can call Daryl because I am not the POA and I will get from there" The writer also mentionedto daughter in law that " I can go and assess the resident first and try to connect with the nurse manager" The daughter in law asked the writer's name and told the writer that she will try to remember the name.

Response : The writer went to assess the resident immediately. The resident has edema present on left leg and writer noticed that there is ulcer present at the left foot back and on the left toe back there is open area. The writer measure the wound and uploaded in the wound rounds. The resident mentioned to the writer that " It was present before but now it is getting bad. " The writer asked resident if resident is having any pain or discomfort that resident denies having any pain or discomfort. The writer informed the wound nurse manager and in-charge. The wound nurse manager came and assessed the resident and advised treatment for the wounds. The writer implemented the treatment. The writer also tried to call POA Daryl but went on voice mail, the writer left voicemail and ext 5260 provided to call back at 1225. The resident mentioned to the writer that " My foot nails need to be cut" The writer emailed Teri and informed the In-charge regarding this.

LATE ENTRY

Note Text : Assessed on medical rounds. POA expressed concerns that resident has difficulty with swallowing and difficulty with speech. Resident expressed the same concerns, attributing them to concerns of her POA. She does indicate that she feels at times her voiceis weak, and she indicates that she sometimes have difficulty swallowing things such as her pills. She reports history of Barrett's esophagus, with no GI follow-up in the past several years according to the resident. She remains on PPI bid. We discussed follow-up for Barrett's esophagus, possible referral to GI, possible endoscopy. Resident was willing to proceed. I have requested notes from previous GI/endoscopy and referral to GI will be arranged.

Resident also reports she is generally tired, and sleeps a lot through the day. No fever/sweats or other specific symptoms. Recent bloodwork okay, blood sugars okay. Screening bloodwork will be done regarding fatigue. Follow.

LATE ENTRY

Note Text : Assessed on medical rounds. Reviewed regarding pain management. Pain scores variable, 0 to 8. He continues on Hydromorph Contin 4.5 mg daily at hs. PRN Hydromorphone is used 0 up to two times per day, most often at night/early morning hours. Resident generally reports low back pain.

Recent bloodwork reviewed, CBC and LUC okay. WBC 11.9(improved from previous 13.7). Abdominal x-ray showed no fecal loading. Left femur x-ray showed prior left PHA okay, no evidence for femur fracture.

Due to ongoing episodic pain at night, Hydromorph Contin at hs will be increased to 6 mg. Voltaren to the low back will be added routinely and prn for pain. Continue to follow regarding pain management.

Data : POA returned the call

Action : Writer told POA that the call was to answer her questions about resident being positive for ESBL. POA Said she was unsure why staff was putting on a protective gown in resident's room, she was worried that resident May have had something serious. Writer explained that resident indeed tested positive for ESBL and and was also treated for UTI with her consent using fosfomycin, writer also explained that ESBL is enzyme produced by some bacteria that makes them resistant to certain common antibiotics, such aspenicillins and cephalosporins. These bacteria can lead to UTI. The gown was to protect everyone during care for resident.

Response : POA verbalized understanding and appreciative, she asked how her mom was doing and writer checked in on her mom and told POA that the resident was doing great and about to sleep. POA appreciative of call and said she would call back if she has any other questions

LATE ENTRY

Note Text : Assessed on medical rounds. Resident has reported some urinary frequency including nocturia. She is slightly vague as a historian but it seems that this has been ongoing for months. She indicates that frequency improved when she was most recently treated for UTI but since symptoms have returned. No other lower UT symptoms noted. Most recent urine culture positive for ESBL, E.coli.

It was discussed with resident that her seemingly chronic lower UTI symptoms may represent irritable bladder/detrusor instability or other cause for incontinence and may not be resulting from a UTI. Options are to continue to monitor for any urinary symptoms or trial treatment based on C&S results. However, if resident's symptoms persists despite antibiotic treatment, then they are not attributable to UTI. Resident indicated that she would like to trial additional course of antibiotics. Fosfomycin 3 grams po q2days times four doses has been ordered.

Resident also expressed concern regarding her continence management, availability of pull-ups. I have requested continence lead to follow-up this concern.

Effective Date: 09/29/2025 10:13 Type: Physician Note

LATE ENTRY

Note Text : Assessed on medical rounds. As per assessment last week, transition transition was made from Oxyneo to Hydromorph Contin. Hydromorph Contin was started on September 25th. Subsequently, resident was noted to have elevated creatinine so Voltaren was also held. She has been using prn Oxycodone four times per day, generally documented as effective. She reports fluid intakes have been good but complains of some nausea. She also complains of loose stools, which were present at the time of assessment last week. She reports that pain management at her right stump is worse. She also reports feeling panicky. She does have a history of anxiety/panic, but has not experienced panic in the past several months. No sweats, chills, stomach cramps or other pain reported.

Regarding elevated creatinine, Foley catheter remains in place. Catheter has been in place since previous hospitalization. Order was provided a few days ago to change catheter due to elevated creatinine and catheter due for a change. Urine culture was ordered. Follow-up bloodwork to reassess renal function was also ordered as well as Voltaren placed on hold as well as Empagliflozin and Metformin placed on hold.

VS reviewed, stable. Resident seen seated in her room, alert and conversational. Mood seemed slightly low, resident appeared mildly anxious. Color okay, slightly pale. Mucus membranes moist. Pupils equal, normal. Resps easy and regular. Abdomen soft and benign. Yellow urine draining in catheter collection bag. Resident states he has been bypassing since early this morning.

Symptoms likely multifactorial. Change in Oxyneo to Hydromorph Contin possibly contributing, with slight reduction in overall e qqu analgesic dose. Hydromorph Contin will be increased to 10.5 mg po bid. Continue with Oxycodone prn. Continue with pain management. For panic, Lorazepam 0.5 mg po bid prn has been ordered. Monitor sleep pattern. Regarding elevated creatinine, ensure catheter is functioning well. Urine C&S pending, follow-up bloodwork pending. Voltaren and Empagliflozin/Metformin remains on hold. Fluids are encouraged. Decline renal function could be related to medication, infection, hydration, or other etiology. Await investigations and follow closely. Dictated by Dr. Lee Andersen dictated but not read

Effective Date: 09/22/2025 10:16 Type: Physician Note

LATE ENTRY

Note Text : Assessed on medical rounds. Medications reviewed due to significant outstanding pharmacy charges and resident will no longer be sending medications requiring payment. Resident has an order for prn Clearlax for which she has not been using. She is also on Senokot routinely. Clearlax will be discontinued, and Lactulose prn has been ordered.

During recent hospitalization, oral Diclofenac was changed to Coltracine, I am not sure if this was due to hospital pharmacy formulary. Coltracine is not covered, so we will revert to oral Diclofenac. Additionally resident was started on Cyclobenzaprine during recent hospitalization, presumably in an effort to improve pain management after fall/right femur fracture. Pain management is improved at this time, and Cyclobenzaprine will be discontinued.

Lastly, resident receives Oxyneo 70 mg po bid plus Oxycodone 10 mg prn. She has been using Oxycodone since admission to Mill Creek. At

Resident Name : PICKETT, ELIZABETH (001010)

Location : 2 West W223 2

Admission 04/18/2023

Medical Record # : 3191 005 689 WE

Gender : F

Date :

Date of Birth : 02/13/1960

Physician : Andersen, Lee

Pharmacy : Medisystem Barrie IMM

Allergies : Spiders

Diagnoses : Acquired absence of leg at or below knee(Z89.5), Osteoporosis, unspecified(M81.9), Primary generalized (osteo)arthrosis(M15.0), Chronic obstructive pulmonary disease, unspecified(J44.9), Depressive episode, unspecified(F32.9), Type 2 diabetes mellitus without (mention of) complications(E11.9), Hereditary and idiopathic neuropathy, unspecified(G60.9), Other specified intervertebral disc degeneration(M51.3), Gastro-oesophageal reflux disease without oesophagitis(K21.9), Chronic lymphocytic leukaemia of B-cell type(C91.1), Unspecified fracture of neck of femur, closed(S72.090)

this time, options for alternate analgesics 2were discussed and resident was agreeable to trial of Hydromorph Contin. Hydromorph Contin will be initiated at 9 mg po bid, which is the lower of suggested equi-analgesics doses provided by pharmacy. It was also recommended to change prn for breakthrough to Hydromorphone, however resident prefers to continue with prn Oxycodone at this time. Pain management will be monitor on this new regiment, and Pasero scores will be utilize to monitor for side effects.

Effective Date: 09/24/2025 10:16 Type: Physician Note

LATE ENTRY

Note Text : Assessed on medical rounds. Resident has had change in health condition over the past few days. On September 21st in the early morning she was noted to have low oxygen, with sats improving to 93% with supplemental oxygen via nasal prongs. Later the same day at 1800, sats were normal on room air, and on September 22nd sats were normal on room air. She was noted to be alert with good intakes. Yesterday September 23rd she was noted to be drowsy during the day, falling forward from her wheelchair to her knees. This was witnessed, no apparent injuries. Yesterday evening in bed it was documented that she was lethargic, with O2 sat noted to be 80% on room air. Other VS stable. O2 sat improved to 94% with 3 liters of oxygen via nasal prongs.

Increased leg edema has been noted over recent days. No documented history of MI, CAD or CHF. Risk factors in her medical history include Type 2 diabetes, hypertension, hyperlipidemia, and peripheral vascular disease. She also has a history of anemia.

Due to BPSD with agitation, Risperidone recently started. current dose 0.375 mg po bid. BPSD significantly improved.

Other relevant mediations include ES Citalopram 10 mg po daily, Bisoprolol 5 mg daily, ASA 81 mg daily, Enalapril 5 mg po daily, Amlodipine 10 mg po, Statin and ferrous fumarate 300 mg po daily.

This morning at the time of assessment she was seated in her wheelchair, awake, calm, pleasant and interactive. She denied pain or respiratory symptoms. Color somewhat pale. Mucus membranes moist. Resps easy and regular at rest. Normal breath sounds audible bilaterally, few fine inspiratory rales at the bases. Pulse regular, quiet heart sounds, no significant murmur heard, rate control, abdomen soft and benign. Pitting edema present below the knees bilaterally. Tubi grips in place.

Likely CHF. Monitor VS bid. Chest x-ray requested stat to be completed by STL or by RVH long term care program if needed. Supplement oxygen to maintain sats at 90%. Lasix 40 mg po bid will be added for three days, and then reduced to once daily. Bloodwork has been ordered, including tests with respect to identifying falls risk and PNP. Due to recently identified worsening anemia (Hb 76), CBC will be followed weekly as well as LUC given addition of Lasix. Urine R&M to look for blood loss. Unfortunately, fecal occult blood testing is no longer available. Continue with iron supplementation. Pantoprazole will be increased to bid. Follow.

LATE ENTRY

Note Text : Assessed on medical rounds. Resident recently out to BVI for mesenteric artery assessment. Results showed celiac artery stenosis, SMA occlusion, IMA stenosis and interpretation by Dr. Cooper recommends clinical assessment. I have recommended follow-up with BVI/ Dr. Cooper to clarify whether resident would be seen in consultation by vascular surgery. She has a known diagnosis of inflammatory bowel disease, and receives infusions with biologics.

After recent increase in Risperidone to 0.375 mg po bid, BPSD appeared to be improved. Resident demonstrating less agitation, mood improved.

Recently noted swelling to lower extremities. No history of renal failure or heart failure. No pain or other associated symptoms. O/E there is pitting edema to the bilateral lower extremities involving the feet to the ankles. Indentation from sock cuffs present. No heat, erythema or tenderness on palpation. No calf or popliteal tenderness. For dependent pitting edema, I have recommended tubi grip stockings, elevate feet when possible, and bloodwork has been ordered.

Glycemic control reviewed with BS remaining elevated, except fasting a.m. readings. Aspart will be increased to 4 units subq tid with meals, and continue to follow glycemic control.

Effective Date: 09/25/2025 13:14 Type: Family/Resident Involvement

Data : Writer contacted POA in regards to a basic room becoming available. Resident was on the internal transfer list due to financial reasons. POA declined the move as she feels it would be a hard transition now that the resident has been in a private room for a couple of years. They would like to be taken off the list and stay in the current room.

Action : Writer removed the resident from the internal transfer list.

Response : POA was thankful for the call and offer. She is happy to have the resident stay where he is currently.

LATE ENTRY

Note Text : Assessed on medical rounds. Resident had falls on September 19th and 21st from his chair with no apparent injuries. He was monitored on head injury routine, which was reviewed with no concerns. He remains on safety checks with respect to falls risk. No pain noted subsequently. Activity and function as per his usual. He was seen seated in his chair, alert, calm, and appeared comfortable. Color normal, resps easy and regular.

Recent falls with no significant injuries. Ongoing measures for falls prevention.

LATE ENTRY

Note Text : Assessed on medical rounds. Resident has had frequent assessment and medication adjustment recently related to CHF. This morning, nursing expressed concern that BP could not be obtained. Resident appeared tired but responsive. HR within normal limits, rhythm irregular. O2 sat was noted to be low at 78% but improved on 2 liters of oxygen to 93%.

At the time of my assessment, daughter was present at the bedside. Resident was in bed with head of bed elevated, awake but reported feeling tired. She reports that she previously felt SOB, but improved with O2 via nasal prongs. She denies any pain. Reduced appetite.

Recent vitals reviewed, HR generally between 48 and 97, systolic BP between 89 and 134. Resident's color okay, no significant pallor, icterus or cyanosis. Mucus membranes moist. Pulse irregular, radial pulse palpable. Resps easy and regular, normal breath sounds bilaterally with no adventitial sounds except for a few inspiratory rales on the left. Leg edema shows improvement compared to last assessment.

CHF. Edema improved on Lasix 80 mg po bid, however resident may be volume deplete at this time, contributing to some degree of hypotension. However, based on palpable radial pulse, systolic BP likely to be at least 80. Ramipril has been reduced to 2.5 mg po daily and will be placed on hold at this time. Due to lower HR, Bisoprolol will be reduced to 2.5 mg po daily. Cardiology consult was booked for this afternoon, but due to health condition, she will not be going out to this appointment. Daughter will be in contact with cardiology office for possible virtual appointment or rescheduling. Treatment plan reviewed with POA/daughter at bedside, and she was agreeable with this plan.

Also of note, dermatitis on the buttocks noted, images reviewed, order provided for Canesten/Hydrocortisone plus Calmoseptine bid and prn.

Continue to follow closely.

LATE ENTRY

Note Text : Assessed on medical rounds. Resident notes ongoing lower leg edema. She continues to be non-compliant with tubigrip stockings. She reports some SOB on exertion today. Echocardiogram complete due to concerns for CHF. Results include AFIB, moderate LV dysfunction with ejection fraction 42%. Right systolic function somewhat diminished with right atrial dilation and moderate tricuspid regurgitation. Mild pulmonary hypertension also noted.

VS have been stable, systolic BP between 100 and 120. HR within normal limits with documented heart rate of 60 to 95. O2 sats have been normal. At the time of rounds, resident was seated in chair in her room with her feet elevated. She appeared calm, comfortable and in no distress. Color okay, resps easy at rest. Pulse slightly irregular, rate normal. Normal breath sounds audible bilaterally with fine inspiratory rales in the left anterior field. Good breath sounds to bilateral bases. Bloodwork reviewed, CBC and LUC okay.

AFIB, CHF. She continues on Apixaban for known AFIB. Diltiazem will be changed to Bisoprolol, follow regarding BP and rate control. She continues on reduced Ramipril 2.5 mg po once daily. Lasix will be increase to 80 mg po bid, continue with weekly weights. Tubi grip discontinued as resident is consistently refuses, despite health teaching. LUC will be completed weekly. Chest x-ray to assess previous pneumonia to rule out CHF. Continue to monitor VS bid. Cardiology referral as requested by POA.

better, legs are feeling better.

Resident was seen seated on her bed, with feet dependent on the floor. She was alert, pleasant and interactive. Most recent weight shows 1 kg of weight loss from the prior weight. VS stable, (on reduce dose of Ramipril). Lower extremities are not appreciably from last assessment two days ago. Possibly some reduction in pitting edema. Optifoam dressing present over left lower leg blister.

GI symptoms likely secondary to Clavulin, resolved. Echocardiogram pending to assess cardiac function tomorrow, rule out CHF. Continue on reduced Ramipril, and continue on Lasix 60 mg po bid. Follow bloodwork, weights. Blister to be follow on wound rounds with treatment orders in place. Follow.

Effective Date: 09/08/2025 10:11 Type: Physician Note

LATE ENTRY

Note Text : Assessed on medical rounds. Resident is being followed with respect to bilateral pitting edema of the legs and has completed course of Clavulin for pneumonia on chest x-ray findings. At this time, she reports that her appetite is poor, but denies nausea, abdominal pain or other GI symptoms. She reports that her bowels are regular. Course of Clavulin recently completed. She denies respiratory symptoms. Resident indicates concern regarding ongoing lower leg edema but reports it is slightly better than lastweek. She is not compliant compression, and staff reports that she is occasionally elevating her lower legs.

O/E resident was seen to be alert, seated on the side of her bed, feet dependent on the floor. Bilateral pitting edema below the knees continue. ON the right lateral lower leg, scattered ecchymosis, similar to last assessment. Skin intact. On the left lower leg, lateral aspect below the knee shows a deroot blister, lateral dermal edema with some non-blanching erythema extending down the lower leg laterally. Most recent VS today showed BP 113/70, pulse 79, oxygen saturation 91% on room air.

Assessment and Plan:

Pneumonia, clinically asymptomatic and course of treatment has been completed. Follow-up chest x-ray ordered. Ongoing pitting edema to the lower extremities, with possible slight improvement last week on Furosemide 40 mg po bid. Continue to monitor VS bid, fluid restriction to 1.5 liters per day. Low salt diet. Resident is continued to keep feet elevated and to wear compression, however she is not compliant with this. Furosemide will be increased to 60 mg po bid. Continue with weekly weights, bloodwork to monitor electrolytes and renal function. Dressing to left lower leg wound (blister), and nursing staff to follow. Ramipril will be reduced to 2.5 mg po once daily at this time. Continue to follow closely and reassess next rounds.

LATE ENTRY

Data : Writer received a call from POA daughter Karen, she raised concerns regarding outstanding investigations. She questioned why the resident's blood work had not yet been completed. Writer informed her that the blood work would be completed today.

Karen then mentioned about the ECHO, asking how long it would take and whether it could be done in-house or she has to take her. Writer explained that the ECHO is not performed internally and that the resident would need to go to the clinic. Karen further asked about the timeline, and Writer informed her that the requisition was faxed to the clinic on Wednesday and we are awaiting a response to schedule an appointment.

Karen also mentioned that the resident is weeping a lot from her legs, Writer mentioned that dressing is applying to both legs as per the wound nurse's advice.

Karen also asked when the resident's chest X-ray would be repeated to assess the effectiveness of antibiotics. Writer informed her that as MD LE's order, chest X-ray is scheduled for September 22. Karen expressed concern, stating that the date felt too far away and that "things are getting delayed every day." She mentioned that she and her sister had discussed the situation and felt it might be best to take her to the hospital.

Writer notified Karen that if she wished to take the resident to the hospital, she could take her. (NM TH notified) Karen stated that she had been trying to call her mother, but she is not answering the phone. Writer said I can give my portable phone to MONique if you want to talk to the resident now. she said that will be perfect.

Action : Approximately 10 minutes later, Writer contacted Karen again to provide an update regarding the ECHO. Writer informed her that the requisition had been re-faxed to the clinic, and IC RP also attempted to call the clinic but received no answer. As per RN TS, it generally takes 1-2 weeks to secure an ECHO appointment.

Response : Karen later reported that she had spoken with her mother and she refused to go to the hospital. She stated that she did not want to force her.

Karen said that if she is going to refused in the hospital, "the doctor is also not going to treat her if she doesn't want to be treated, so there is no point in taking her."

Effective Date: 09/03/2025 10:10 Type: Physician Note

LATE ENTRY

Note Text : Assessed on medical rounds. Resident recently noted to have increase in leg edema, started on Lasix 40 mg po daily. She is no compliant with tubi grip stockings, and only occasionally elevates her feet. She was also noted to have left lower lobe pneumonia on chest x-ray but no findings of CHF. Treatment with Clavulin was started. Resident reported GI upset with episode of vomiting while eating breakfast. According to nursing staff, she continued eating following the episode. No ongoing GI symptoms at the time of rounds.

Resident has been afebrile, VS stable. Most recent weight 81kg, represent significant weight gain in the past month. Resident appeared alert, interactive and in no distress. Color okay, resps easy and regular, no cough. Normal breath sounds audible bilaterally with few inspiratory rales at left base. HR normal, rhythm regular. Ongoing pitting edema to bilateral lower extremities. Left lower leg shows small ecchymosis. Right lateral lower leg shows fluid filled blister.

Complete course of Clavulin for pneumonia, and follow-up chest x-ray is ordered. GI upset possibly secondary to Clavulin. Monitor for any further GI symptoms. Due to ongoing lower legs edema, increase Lasix to 40 mg po bid and follow-up bloodwork has been ordered. Weekly weights have also been ordered. Echocardiogram ordered to assess cardiac and valvular function, rule out right sided heart failure. Fluid restriction of 1.5 liters per 24 hours, low salt diet. Resident is again encourage to comply with tubigrip stockings, however she has declined. Resident is also encouraged to elevate feet whenever possible. Continue to follow.

LATE ENTRY

Note Text : Assessed on medical rounds. Resident sustained a fall last week, with minor head injury, right frontal bruising as well as significant skin tear on her right arm. She was monitored on head injury routine with no concerns. She remains on Coumadin anticoagulation. Skin tear being monitored on wound rounds, dressing orders in place. At the time of rounds, resident reports pain at the site of skin tear. Pain has been monitored since the fall with variable pain levels. Hydromorphone prn is ordered as well as routine Tylenol qid. She has been using Hydromorphone one to three times per day, generally with good effect. She was recently seen in pace maker clinic, with no concerns.

VS reviewed stable. Resident seen resting in bed, mild tachypnea and audible expiratory wheeze. Skin changes on forehead related to recent radiotherapy as well as right frontal bruising from fall. Color okay, breath sounds audible bilaterally, diffuse expiratory wheezes. Dressing in place over right arm skin tear. No significant swelling in the arm or hands. Abdomen soft and benign. Lower extremities okay. Recent chest x-ray showed no acute findings, no evidence for rib fractures.

Recent fall with minor head injury and right arm skin tear. Skin tear orders updated to include non-adherent contact layer. Continue to follow regarding pain management with order for prn Hydromorphone in place. Follow.

Effective Date: 09/29/2025 14:17 Type: Family/Resident Involvement

Data : In conversation with the resident's POA (Paola - sister), she explained that last evening it was noted that the resident did not seem himself and their was concerns re: possible low blood pressure. The Unit Supervisor did assess the resident, blood pressure was within stable range at that time; 117/73. As per Paola, this blood pressure reading isn't the resident's baseline and if systolic blood pressure is below 125 he should be closely monitored; the Writer has updated special instructions with info.

Action :

Response :

Author:Ashline Johnstone RESP - Nursing - Behaviour Support Manager [e-SIGNED]

Signature: _____

Effective Date: 09/29/2025 13:20 Type: Family/Resident Involvement

Data : Writer was informed by the Unit Supervisor and Skin + Wound Lead that the resident has new redness to his right thigh area; similar to the current pre-existing redness located on his left thigh; assessed by Skin + Wound Lead and Unit Supervisor earlier today.

Action : As per the Unit Supervisor, the resident is frequently being repositioned in his wheelchair and also while in bed for offloading purposes. Previous information was thought to be that the resident's wheelchair could be a cause of the pressure, however, speaking with the Physiotherapist, the wheelchair is not the culprit; it's a repositioning piece and how the resident often shifts his position due to poor trunk control. Following the assessment, the recommendation was to reposition the resident hourly via mechanical lift.

Response : The Writer called the resident's sister, Paola (POA for Personal Care) to update on the skin condition along with recommended intervention. During conversation, Paola expressed she felt that hourly reposition via mechanical lift will cause the resident too much stress which can further lead to seizures due to stress levels. She agreed for hourly reposition, however suggested to use the lift at a minimum and would rather have a 2 person manual reposition while in his wheelchair. The Writer explained that not all staff feel comfortable with this due to strength abilities but we'd do our best to accommodate this request; Paola very appreciative of the call and update provided. No voiced concerns.

LATE ENTRY

Note Text : Resident scheduled for change of supra pubic catheter by NLOT tomorrow. Late last week it was noted that resident had coughing and spitting on one occasion with cares, but no respiratory symptoms have been noted since. He was also noted to have some discharge from the urethral meatus on one occasion, but there have been no ongoing concerns noted since. X-ray was ordered, which showed no acute findings and no evidence for pneumonia. Degenerative changes in thoracic spine were noted. Swab from urethral meatus was sent for C&S as well as urine for C&S. These are pending. VS have been stable. Continue to monitor health condition.

Effective Date: 09/15/2025 11:17 Type: Family/Resident Involvement

Data : f/u with POA concerns

Action : Writer spoke with the resident's wife today regarding several concerns she has brought forward.

As per POA, she reports that during her visits, the resident is often found soaking wet and soiled with feces. She also raised a concern about the resident receiving laundry items that belong to another resident with a similar name.

CSR initiated

Actions Taken:

Toileting Program Initiated:

Resident has now been placed on a toileting program, with checks scheduled every 2 hours. Care plan has been updated accordingly. In-service for staff is currently in progress.

Incontinence Product Update:

A request for a change in incontinence products has been submitted. Due to the resident's incontinence, the product has been changed from pull-ups to blue briefs. As per POA's instructions, staff are to place the brief on top of the incontinence product. This directive has been included in the resident's care plan.

Laundry Concern Addressed:

POA has requested to take home the resident's laundry for washing. An enabler has been placed on top of the resident's laundry hamper to ensure all soiled clothing is placed there for the wife to collect.

All updates have been documented in the care plan. Ongoing monitoring and follow-up will continue to ensure concerns are addressed appropriately.

Response : plan of care ongoing

LATE ENTRY

Note Text : Assessed on medical rounds. On September 28th resident demonstrated some physical aggression towards coresident and toward staff according to progress notes. DOS reviewed, not fully complete, and expressions of physical risk on September 28th not captured. She continues on Lorazepam 5 mg po daily and Risperidone was discontinued. Today she appeared calm, ambulatory, and in no distress. Due to some ongoing BPSD with agitation/aggression, Olanzapine will be increased to 7.5 mg po daily. Continue to follow.

Abdominal U/S results reviewed. Mass at right liver lobe measuring 5 x 3.5 x 3.6 cm noted, showing an increase size from 2.8 cm. Nodular structure also noted in the region of the head of the pancreas, possibly pancreatic enlargement. Plan to review these results with POA, along with overall discussion of goals of care. Resource nurse to schedule meeting.

LATE ENTRY

Note Text : Resident seen on medical rounds. Medications adjusted at approximately ten days ago as per geriatric psychiatrist Dr. Daniel. Some improvement has been noted in resident's behavior, however DOS charting indicates occasional verbal and physical aggression at times. Physical aggression was documented on DOS on September 13th, however there was no further details in progress notes.

At the time of rounds, resident was alert, more pleasant and interactive then prior. She denied complaints. As per recommendations from Dr. Daniel, Olanzapine will be titratedm with dose increased to 5 mg po once daily at 1700 hours. Risperdal will be weaned, with discontinuation of Risperdal 0.25 mg po bid at this time. Continue to monitor regarding behaviour, with one to one staffing, DOS. Follow.

LATE ENTRY

Note Text : Assessed on medical rounds. Resident continues to be monitor regarding BPSD. Recent monthly pain management evaluation was effective. She continues on routine Tylenol, Nabilone, Celexa and Risperidone 0.25 mg po qid(dosing schedule as per POA request). Dr. Daniel recently consulted, and recommended reduction in Risperidone to 0.25 mg po bid, and add Olanzapine 2.5 mg daily at 1700 hours. Plan to wean Risperidone to 0, and titrate Olanzapine to 10 mg per 24 hours. He also recommended bloodwork regarding liver function, to ensure adequate medication metabolism. These orders have been provided.

To rule out underlying medical cause, urine C&S was completed and showed no growth. Bloodwork was completed, with LUC, calcium, albumin, magnesium and TSH normal. Recent BS okay.

Ongoing BPSD. No apparent acute medical cause contributing. Proceed with medication changes as per Dr. Daniels' recommendation, with Dr. Daniel's consult note pending.

LATE ENTRY

Note Text : Assessed on medical rounds. Due for reassessment of reduced Sertraline 25 mg po daily. Due to recent health changes with pneumonia, no changes to Sertraline will be made at this time. Monitor regarding health condition, mood/BPSD and consider further reduction/discontinuation of Sertraline in one month.

Resident noted to have rash on her buttocks. Image from wound rounds reviewed, with significant erythema and satellite lesions on buttocks, medially. Possible component MASD, incontinence but also likely candida. Order provided for Canesten/1% Hydrocortisone powder bid, allow to absorb/dry and follow with zinc barrier cream bid and prn. I have also requested optimization of continence care. Follow.
