mar and chart reviewed

seen alone

just had her bday recently

lots of flower bouquets in her room, telling me about her favourite flowers

has new paintings on her wall, I asked about them, pt is the artist!

spoke for nearly an hour about her artwork

showed me photos of prev exhibitions, the works she sold, what she liked to paint, who she painted with, how much she sold paintings for,

various techniques with acrylic

trying to paint now, gets tired, showed me her water lilies

thinking about trying watercolours

smiling, fluent, no distress

very engaged in conversation

most happy and chatty I've encountered so far

had a lovely lengthy chat about art, I didn't realize how much time had passed myself

will cont to follow for psychosocial support

Note Text : Palliative care follow up
88M dementia
reviewed mar and chart
nursing staff report fell about a week ago
since then has been solely in the wheelchair, no longer ambulating
PT seems to be very content with this
spoke with daughter Maria and she feelshe is more comfortable in the chair
has not attempted to get up or walk
no agitation at all, no agitation for weeks
they'ved noted some coughing but better with the cough syrup, no other symptoms

sitting in chair
watching YouTube videos on a tablet
smiling, giving me thumbs up
no distress

slowly decline, but seems to be doing well in the chair, no agitation, Maria is happy with this as well, awaiting permanent chair for him
will cont to follow up intermittently for support

Resident Name : BARBOSA, ARMANDO (288561)

Location : 5 506 B

Admission 11/29/2024

Medical Record # : 9245 582 797GF

Gender : M

Date :

Date of Birth : 01/22/1937

Physician : SIDLOFSKY, RICHARD

Pharmacy : MediSystem Toronto IMM

Allergies : No Known Allergies

Diagnoses : Pure hypercholesterolaemia(E78.0), Congestive heart failure(I50.0), Dementia in Alzheimer's disease, unspecified(F00.9), Benign hypertension(I10.0), Arthrosis, unspecified(M19.9), Chronic obstructive pulmonary disease, unspecified(J44.9), Fracture of spine, level unspecified, closed(T08.0), Atrial fibrillation, unspecified(I48.90), Carcinoma in situ of colon(D01.0)

Effective Date: 09/14/2025 04:11 Type: Behaviour - Follow up

Note Text : The resident is monitored for responsive behaviour. No behavior reported at this time. will continue to monitor.

Author:Adetutu Alighoda-Ade RESP - Nursing - Registered Practical Nurse

Signature: _____

Effective Date: 09/13/2025 22:21 Type: Behaviour - Follow up

Note Text : Resident is monitored for responsive behavior. After dinner, resident was noted walking out of the dining room with unsteady gait, refusing to use his walker. He was assisted to a chair near the dining room. As staff was getting the transport chair for the resident, as he wanted to go to the TV room, the resident got up again and started walking towards the nursing station. He was noted walking very unstable and was wobbling. US and staff, who was near the nursing station, ran to the resident preventing him from falling due to unsteady gait. US and staff assisted resident to sit on the transport chair but was refusing. Resident was given space but not too much as he was still wobbling. When he successfully sat on the transport chair, he started swinging his arms towards staff, but staff was able to avoid it. Was redirected, successful. Was brought to the TV room. No further issues noted. Cooperative with care and tolerated medications well. Continue monitoring. Currently sleeping in his chair.

Author:Shayne Caberoy RESP - Nursing - Registered Practical Nurse

Signature: _____

Effective Date: 09/13/2025 06:30 Type: Behaviour - Follow up

Note Text : Resident is being monitored for responsive behavior. Received sitting in the chair in the hallway. Assisted to bed around 2345 with success.. Slept the whole shift sleeping while seating in the couch inside room with feet elevated onto a stool. No behavioural concerns noted during the shift.

Author:Bhekimpilo Moyo RESP - Nursing - Registered Nurse

Signature: _____

Author:Lorena Ford RESP - Nursing - Registered Practical Nurse

Signature: _____

Effective Date: 09/23/2025 17:26 Type: Physician Note

Note Text : Palliative follow up
93M dementia, query parkinson's
followed for support
mar and chart reviewed
seen w PSW at bedside
had a good day, ate breakfast well
cleaned her nails, allowed her to clean him today so feeling fresh
then sleeping ever since
spoke to daughter Angie by phone after
she is more open to increased risperidone, tiny increase at night
but still wanting to optimize non med related interventions
mostly wants to focus on dad being ready for his meds or for a bath, so he is ready and not confused himself
reassured her that the PSW is doing a great job and is waiting for pt to be ready for his meds
Angie feels that dad never took meds before thus trying to honour that wish
we discussed optimizing all sides right now which she is happy with
things have been stressful, her husband was recently in hospital, now back to LTC

lying in bed, eyes half open, not speaking, looks comfortable

supportive listening provided, will cont to touch base
Angie stated she's grateful forthe education on what to expect, a few times had thought that this was the end, but then it was a fluctuation,
aware of fluctuating course of dementia more
reassured can also discuss further whenever needed

followed for support

seen w private psw

mar and chart reviewed

had a good breakfast

since then mostly sleeping all day

notes show some ongoing aggression towards staff, similar to last I saw him,will decline care at times

has had more falls

sleeping comfortably, no distress

bed is in the lowest possible position

I will follow up with his daughter next week

it looks like Angie has been ok with a slow increase in risperidone

Note Text : Resident is being monitored for responsive behaviour. Resident requested to have a bath in tub this evening. Writer explained that bath tub is not working well (leaking) and that shower drain is leaking to other floors therefore unable to use it. Residentstated " No its not that, its just the staff has to get trained on how to use the tub" "Other residents get to use the tub". Nurse manager informed and went to talk to resident. Resident was offered to use other shower room or use the bathtub on another floor. Resident refused both offers, resident refused shower. HS care given and settled in bed.

Note Text : Writer was called to the floor because resident was yelling and shouting at staff around 2100 when staff informed resident that they will have a shower. Resident was upset that staff did not come and tell her 30 minutes prior to shower that they will come and give her a shower. Writer apologized to resident for the miscommunication. Writer used GPA to encourage resident to have a scheduled shower as it was reported that they refused shower. GPA were effective. Resident received scheduled shower at 2115.

Effective Date: 09/17/2025 22:34 Type: Behaviour - Follow up

Note Text : Around 2045 writer was called to resident's room by PSW (C) upon entering staff told writer that resident did not want to take shower. Writer asked resident if she wanted a shower this evening. Resident stated " the staff should come 1 hour before their break time". Resident usually prefers care at 2100. Writer asked again if she wanted a shower, Resident stated " The two of you are the same" Stated in a loud voice "Get out, Get out" "You stupid assess" "Get Out". As writer and staff was leaving the room resident stated " I will report you tomorrow" Writer informed NM and asked if he can come up to speak to resident. NM spoke to resident and resident agreed to have shower this evening. Shower given, resident settled in bed.

Allergies : No Known Allergies

Diagnoses : Benign hypertension(I10.0), Bipolar affective disorder, unspecified(F31.9), Arthrosis, unspecified(M19.9), Stress incontinence(N39.39), Anxiety disorder, unspecified(F41.9), Polyp of colon(K63.5), Acute respiratory failure, type unspecified(J96.09), Fracture of anatomical neck of humerus, closed(S42.210), Burn of third degree of head and neck(T20.3), Other cholecystitis(K81.8), Other specified symptoms and signs involving the digestive system and abdomen(R19.8), Exposure to tobacco smoke(Z58.7), Type 2 diabetes mellitus without (mention of) complications(E11.9)

Objective:

- On exam, appears at baseline.
- Bilateral knees widened, tender to palpation.

Assessment:

- Bilateral severe osteoarthritis.

Issues:

1. Bilateral severe osteoarthritis

- Counseled re: progressive nature of osteoarthritis and likely ultimate treatment of knee replacement; noted many months likely required before appointment/treatment, providing time to organize accompaniment.
- Chase referral to orthopedics. Orthopedics requested AP, lateral, standing, skyline, tunnel views for X-rays; in-house X-ray at the home cannot provide standing views. Wrote back to orthopedics with existing X-ray reports to inquire about option for hospital-based X-rays prior to appointment.

LATE ENTRY

Note Text : History:

- Continues to complain of bilateral knee pain secondary to osteoarthritis.

Physical Examination:

- Obese body habitus. Challenging visually to assess the anatomy of the knee due to body habitus and advanced OA

Impression & Plan:

1. Bilateral knee severe OA

- Impression: Osteoarthritis

Bilateral steroid knee injection:

Reviewed risks benefits and alternatives with resident and consent given to proceed

Both knees cleaned

1 ml 40 mg/ml Depo medrol (LOT LW7891 EXP 10/2026) with 1 ml lidocaine 2% without epi instilled via anteromedial approach in to both knees

Well tolerated, good hemostasis

Dressings applied

Counseled to keep clean and dry x 24 hours, then wash with soap and water

Monitor for erythema, edema, increasing pain after first 24 hours

Immediate relief noted on right but not left - counseled to give it more time

Await orthopedics

Repeat in 3 months if necessary

Mar and chart reviewed

seen alone

followed for psychosocial support

pt doing ok

had more than one BM today, finds it annoying

the stool sits there, and is uncomfortable

asks for help but not the same as cleaning herself right away

knows that she is not independent anymore which is tough

makes her think about hard times

thinking about her daughter, who had cancer herself two years ago and went through surgery

thankful she's doing better

also thinking of her son who is currently diagnosed with cancer and receiving treatment

finally thinking of her eldest son, has not spoken for 10 years, doesn't know where he is, no one knows, very saddened by this

answering appropriately, fluent, no distress

++ supportive listening, pt stated she was in a bad place before but has come to accept things as much as she can, discussed other meaningful things in life

grateful for the son and daughter she has in her life

offered to call her daughter to touch base, pt stated daughter's in a meeting, call next time

LATE ENTRY

Note Text : Subjective:

1. redness around buttocks, perineum, upper thighs;

2. insomnia.

- waking in middle of night around 2 or 3 AM, unable to return to sleep.

- legs hurt upon waking, preventing sleep; acetaminophen helps with pain.

- Pain medications: last dose of acetaminophen taken at 8:00 p.m.

- Chart review: acetaminophen dosed three times a day at 8 AM, 12 PM, and 8 PM.

Objective:

- Physical examination findings:

- Wound rounds: erythema to buttocks, genital area, perineum, and upper thighs. Skin appeared shiny with some moisture and odor.

- Soft tissue firmness in upper thigh: determined to be chronically folded tissue, similar to inferior edge of breast in many patients.

Assessment:

Facility #:

Date: Oct 15, 2025

Time: 15:52:18 ET

Diagnoses : Benign hypertension(I10.0), Acute renal failure, unspecified(N17.9), Chronic obstructive pulmonary disease, unspecified(J44.9), Anaemia, unspecified(D64.9), Infection following a procedure, not elsewhere classified(T81.4), Cellulitis, unspecified(L03.9), Urinary tract infection, site not specified(N39.0), Generalized anxiety disorder(F41.1), Hypothyroidism, unspecified(E03.9), Candidal stomatitis(B37.0), Obesity, unspecified(E66.9), Atrial Fibrillation, Unspecified(I48.90)

- Diagnosis:

1. Candida intertrigo (suggested by mild odor, erythema, shiny appearance, moisture).
2. Tissue folds (normal firmness from chronically folded skin).
3. Leg pain leading to insomnia.

Issues:

1. Candida intertrigo

- Diagnosis due to mild odor, erythema to buttocks, perineum, upper thighs; shiny appearance and moisture.

- start clotrimazole 1% BID for 7 to 14 days.

- Clinician recommendations or counselling for issue 1: continue until odor diminished and redness improved.

2. Tissue folds

normal tissue firmness from chronically folded nature of skin.

3. Leg pain leading to insomnia

- Treatment planned for issue 3: changed acetaminophen dosing from three times a day (8 AM, 12 PM, 8 PM) to four times a day (8 AM, 12 PM, 5 PM, 10 PM) to reduce overnight pain.

- will reassess in one week.

Medical Record # : 7444 110 881AR

Gender : M

Date :

Date of Birth : 04/17/1930

Physician : HALL, ALISON

Pharmacy : MediSystem Toronto IMM

Allergies : No Known Allergies

Diagnoses : Cataract, unspecified(H26.9), Postcholecystectomy syndrome(K91.5), Blindness, monocular(H54.4), Malignant neoplasm of long bones of lower limb(C40.2), Chronic obstructive pulmonary disease, unspecified(J44.9), Other and unspecified cholangitis(K83.08), Unspecified dementia(F03), Septic shock(R57.2), Thalassaemia trait(D56.3), Glaucoma secondary to other eye disorders(H40.5), Other and unspecified dysphagia(R13.8), Atrial fibrillation, unspecified(I48.90), Heart failure, unspecified(I50.9)

Issues:

1. COPD management

Ensure inhalers are used correctly.

- Requested a spacer device for MDI inhalers.
- Continuation of inhaler therapy with Trelegy inhaler if able to use it correctly
- Consider changing to an alternate if unable to inhale
- Daughter to be contacted to review inhaler use during hospitalization and

2. Mood assessment

- Mood potentially affected by hospitalization and changes to diet.
- Daughter to be contacted to discuss prior expressions regarding end-of-life wishes.

Plan:

- Recommendations and counselling: Inhaler technique needs to be re-evaluated; potential reasons for inability to inhale include illness, understanding, and language barrier.
- Other actions such as referrals or follow-up: Attempt to reach daughter for further information regarding inhaler use and recent mood. Follow-up regarding spacer device delivery.

Note Text : Palliative Care Addendum

Patient returned with daughter from outing

daughter Susan repeatedly stating how tired she is

has been stressed

telling me what she needs to cook for the pt, issues with a soup, having own health issues as well

but happy with how mum is doing

pt sitting in wheelchair, looking as prev baseline, no distress

Susan sharing stressors, slightly tangential in her usual fashion, supportive listening provided

happy pt stable

will cont to follow up intermittently

Effective Date: 09/13/2025 14:33 Type: Family/Resident Involvement

Data : Resident was having breakfast in the dining room, PSW staff had warmed up food that was provided by resident's daughter from the fridge as she brings resident food to have at meals.

Action : At 0900 hrs resident's daughter Susan came to the dining room, she became upset when she noted that PSW staff had warmed up a bowl of soup instead of cereal. PSW staff noted that there was no note or labelling on the container and that the soup appeared to have looked like the cereal that resident's daughter brings for resident to eat at breakfast.

Response : Writer recommended to resident's daughter that the containers should be labelled specifying the time and date of when they should be given to resident. Staff to also document when there is food in the fridge and also writer a note in the communication book. CSR form completed.

Note Text : Neurology eConsult:

Dr Stuart Reid provided consult

Sep 22, 2025 4:22 PM

Dear Dr. Hall,

Thank you for the econsult, I hope you are well.

I have read your description of Ms. Clarke. Her symptoms are typical of someone with advanced Parkinson's disease.

I agree with your plan. I would suggest the following.

1. Be aware that she will have supine hypertension in addition to her sitting or standing hypotension. I see that you have ordered amlodipine for this. It is a very acceptable approach. Captopril could be used, or an overnight nitroglycerin patch if you need a shorter acting solution.
2. Consider changing the levodopa/carbidopa from 2 tabs 3 times daily to 1.5 tabs 4 times daily. This smearing of the the dose may be able to maintain her physical function while improving the orthostatic lightheadedness.
3. You may need to treat the orthostatic hypotension. Given her history of hypertensive urgency I understand any reticence in doing so. Under the circumstances if you were to try something it would likely be best to try pyridostigmine. This can help standing hypotension without aggravating supine hypertension. Typically I would start with a testing of 30 mg twice daily, watching for secretions or diarrhea. Bradycardia is possible but unlikely. If it was well-tolerated I would try 60 mg 3 times daily.

Sincerely,

Stuart Reid

LATE ENTRY

Note Text : Subjective:

- Concerns for bilateral leg swelling.
- Uncertainty regarding purpose and setup of received headphones.
- Reports being unsure what to do when sitting by bedside.

Objective:

- On exam, appeared well.
- Mild pitting edema noted.
- Blood work from 08/20/2025: Creatinine 89, EGFR 52, calcium 2.3, albumin 40, sodium 144, potassium 3.7, ALP 48, ALT less than 10, TSH 1.22, HBA1C 5.6, pro BNP 257.

Assessment:

- Pitting edema, query dependency.
- Liver, kidney, and CHF blood work not suggestive of underlying medical cause for edema.
- Parkinson's disease impacting mood, cognition, and mobility.

Issues:

1. Bilateral leg edema

- Diagnosis or clinical impression for issue 1: Pitting edema, likely dependent. No underlying medical cause suggested by liver, kidney, or CHF blood work.

- Consideration for compression stockings or tube grip. Continuing to walk. Elevating the feet.

2. Parkinsons impact: Sense of connectedness/cognitive stimulation

Signature: _____

Effective Date: 09/26/2025 18:20 Type: Behaviour - Responsive Behaviour

Type of Behaviour : at 18:00 resident 1-1 sitter informed writer that resident hit her on the rt side with her phone while they were in the washroom

Antecedent/Triggers : 1-1 sitter informed writer that she was in the washroom with resident, resident then went to bedside and picked up her phone and went back to the washroom. 1-1 sitter informed resident to wait until she is finished in the washroom then call her brother, resident got upset and hit her with the phone on her side.

Describe the behaviour : resident 1-1 sitter reported that resident hit her on the rt side with her phone while they were in the washroom

Disruptiveness (Data)/Consequences to the behaviour : resident unable to give detail information re:incident, but laughing while writer was talking to her re:her behaviour

Interventions (review/update care plan) (Action) : writer spoke with resident re: her behaviour, and let her know that hitting staff is unacceptable. NOK, Amaechi notified

Change in medication : n/a

What are the risks and causes : 1-1 sitter stated she does not want to fill out incident reports/or speak with the manager

Outcome(s)(Result) : resident noted to be laughing while writer speaking to her re: hitting 1-1 sitter.. N/M made aware of the incident

Substitute Decision Maker notified (if not, explain) : Amachei

Note Text : Palliative care follow up

86M cogn impairment, COPD

mar and chart reviewed

following for psychosocial support

seen w wife

nursing staff reporting similar, no changes

watching TV

pt telling me he sees bugs in the light fixture

feeling ok in general

"no complaints"

pt's voice is much softer than previous

I can barely understand him at times, needing to repeat

not speaking directly, took a lot of repeats to understand pt was referring to the light

no bugs present, the light fixture has a swirling pattern on it that looks like it may be movement

also very indirect when making a comment about the TV show he's watching

?possibly a bit weaker than previous, voice is much softer, speech content more circumferential

in the past, has had odd comments in the past, his godson has mentioned that's his type of humour

will follow up in 1-2 weeks to see if this is consistent change or not

denied symptoms of discomfort

most worried that he's "made a mess" and will get in trouble

generally worried about using the washroom, reassured ++no problem

spoke w son Rennie by phone to update

Rennie feels things are pretty stable, no decline over the last few months

will still have bouts of confusion but not off from his baseline

he's happy about this

rolling himself in his wheelchair

smiling, answering simple yes/no questions

pleasantly confused, no distress

psychosocial support provided

will cont to visit intermittently to follow and monitor for decline

Note Text : S:

- Pain in neck, shoulders, and lower back.
- Lacking strength to get up.
- Pain worse in mornings.
- Describes pain and weakness as "carrying a sack of salt on shoulders."
- also tingling in fingers

Impression & Plan:

1. Neck, shoulder, and lower back pain with weakness in legs and arms
- Investigations planned for Issue 1: Physiotherapy consult for additional exercises to increase upper limb and lower limb strength to aid with getting up from bed.
 - ? provision of assistive device, previously used in hospital to assist with getting out of bed.

Physiotherapy Referral Plan

* Reason for Referral: Neck, shoulder, and lower back pain with reduced strength impacting ability to get up.

Symptoms: Pain worse in mornings. Described as feeling like carrying a "sack of salt" on shoulders.

Previous Intervention: Used a strap-like device in hospital to assist with getting out of bed.

Recommendation: Physiotherapy for additional exercises to increase upper and lower limb strength to assist with transfers from bed.

Attended by wife and son.

Reviewed PMH, Medications. They have some questions about GOC. Roger's GOC was changed to palliative when he was deteriorating in the hospital. He recovered better than expected. They are now rethinking his GOC.

Writer explained the meaning of DNR, palliative care, comfort-oriented care. They have not made up their mind at this point. He is stable medically so we have time to reassess later. I added vitamin D drops for him.

Diagnoses :	Parkinson's disease(G20), Type 2 diabetes mellitus without (mention of) complications(E11.9), Bell's palsy(G51.0), Bipolar affective disorder, current episode manic without psychotic symptoms(F31.1), Benign hypertension(I10.0), Hypothyroidism, unspecified(E03.9), Dementia in Alzheimer's disease, unspecified(F00.9), Left ventricular failure(I50.1), Iron deficiency anaemia, unspecified(D50.9), Urinary tract infection, site not specified(N59.0), Carrier of drug-resistant Clostridium difficile(Z22.303)				

Effective Date: 09/27/2025 20:57 Type: Behaviour - Follow up

Note Text : The resident is being monitored on a 1:1 basis during the evening shift due to responsive behaviors. Throughout the shift, the resident was observed to be verbally agitated, frequently yelling at staff and the writer. The resident repeatedly requested that his wife be contacted and expressed a strong desire for her to visit him at the facility.

The resident's wife was contacted by the writer and informed that she plans to visit tomorrow. Despite being redirected and reassured by staff and the writer on multiple occasions, the resident continued to repeat the same statements with minimal response to interventions.

At one point, the resident stated, "If my wife does not come to see me, I will call 911 and go there myself." The resident was also observed wandering frequently in the hallway and exited to the downstairs area with assigned staff on two to three occasions.

The resident was noted to be verbally abusive during the shift. At approximately 20:40, the resident went to bed and is currently observed to be resting.

Author:Rakhi RESP - Nursing - RN - Unit Supervisor

Signature: _____

Effective Date: 09/27/2025 14:05 Type: Behaviour - Follow up

Note Text : The resident is being monitored for responsive behavior. 1:1 monitoring is in progress. Resident was talkative and noted walking back and forth on the unit, went to basement few times with 1:1. Resident stated "I want to make something for you all and I don't wanna waste money to buy stuffs from outside, it costs so much..they're smart to make money". Also requested the writer get supplies from Kariba foods until 1700 hrs so he can make food to sell. No other concerns were noted this shift.

Author:Tara Basnet RESP - Nursing - Registered Nurse

Signature: _____

Effective Date: 09/27/2025 05:48 Type: Behaviour - Follow up

Note Text : Resident was awake most of the time during the night. Never got out of bed despite being awake. Around 0530 resident was having a conversation with writer about getting supplies from Kariba foods so that they can make food to sell. Asked if they could get up and get ready to go and order supplies. Writer informed resident that it was too early and all the shops were closed at the time. Redirection effort effective. Resident currently lying comfortably in bed at this time.

91F dementia, following for support

Mar and chart reviewed

Roland visited her recently

said she mostly stared into space, didn't really talk about anything, he tried to show her photos of Austria, she cried quietly, "zoned out", didn't answer yes/no questions to him either

he found it very difficult

similar to a zoom call from a few months ago

and then before then he was able to visit in person 8 months ago. At that time was having hallucinations, this time did not speak of this wonders how long this can possibly go on for

holding my hands, teary, then settles

with me, stating she feels bad, doesn't know how to describe it, not pain

crying, teary

easily redirected and distracted by looking at the photos on her wall

general decline slow but ongoing: being treated for a coccyx wound as well, Roland sees the slow decline. We discussed dementia typical course, hard to predict compared to organ failure or malignancy, but we are seeing slow decline over the course of months. Reassured I will touch base with him about once a month to update, more frequent if needed when declines further hastens

Palliative Medicine Consult

Patient: LANZILLOTTA, NOVELLINO MRN: 424-334-647 FIN: 13683638

Age: 94 years Sex: Male DOB: 1930/10/20

Associated Diagnoses: None

Author: Natalie Frances Pulenzas, MD

Consultation Information

Palliative Care Weekend - On Call

ID: Mr. Lanzillotta is a 94 yo man with newly diagnosed left Oropharyngeal Mass and metastatic lymphadenopathy suspicious for malignancy with moderate to significant oropharyngeal narrowing, biopsy results pending.

RFR: Goals of care. Asked by MRP team to see for urgent same day consult as reported family strongly wished to see palliative care today. Seen by our palliative care team Dr. Siemens on August 28th who optimized PRN medications and patient gave permission to speak with family as needed.

DIAGNOSIS:

In the past several months there has been progressive slurring of speech and swelling of left neck. Intermittently having difficulty eating. Found to have blood on pillowcase, sent to dentist who found a large oropharyngeal lesion and sent him to the ER. No stridor in ER but was having difficulty lying down. A CT scan of his head and neck revealed a large exophytic and infiltrative mass from the base of the tongue slightly eccentric to the left side. It measures approximately 5.9 x 3 x 6 cm. Admitted under ENT on August 27th.

HISTORY OF PRESENTING ILLNESS:

Since admission, ENT performed scope via nasal cavity: "no pus/polyps, nasopharynx with old blood crust. Oropharynx revealed significant narrowing on the left side with exophytic tumour occupying the left oropharynx/GT sulcus and extending along the left BOT and beyond midline. Unable to visualize the valleculae with tumour effacing the epiglottis partly posterior. The scope was advanced along the right pharynx below the epiglottis rim which revealed complete laryngeal structures to be intact including normal vocal cords with appropriate symmetric movement. No laryngeal lesions were notified."

Resident Name :	LANZILLOTTA, NOVELLINO (288567)	Location :	Admission	02/24/2025
Medical Record # :	2138 368 457EB	Gender :	Date :	
Physician :	HALL, ALISON	Pharmacy :	Date of Birth :	10/20/1930
Allergies :	No Known Allergies			
Diagnoses :	Drug-induced gout, ankle and foot(M10.27), Atrial fibrillation, unspecified(I48.90), Transient cerebral ischaemic attack, unspecified(G45.9), Unspecified dementia(F03)			

Biopsy has been performed with results pending. A G tube has been inserted with feeds running and NG tube was removed. Had one episode of bleeding Aug 29th overnight managed with 1g of TXA then switched to TXA mouthwash. GIM was consulted for ?atrial fibrillation, had various recommendations for medical work-up and stated "recommend holding off on initiation of anticoagulation while diagnostic/surgical planning is underway and while his goals of care are being established with palliative care."

Mr. Lanzillottawho goes by "Lino" was seen on the ward today, accompanied by his two sons (Tony and Greg). Lino was tired and did not wish to talk today, has given us permission to speak with his sons.

SYMPTOM ASSESSMENT:

- 1.Fatigue: Generally more tired since admission, less active than baseline but still able to get up and go for walks with his family on the ward.
- 2.Sleep: Sleeping more through the day and was awake most of last night, mildly restless and confused asking about "I want to eat a plate of spaghetti". No agitation or severe restlessness. Tried melatonin once two nights ago, didn't think it was very helpful.
- 3.Confusion: Mildly confused at moments over the past few days such as asking questions repeatedly about when he can eat or getting confused with days/times. Recognizes family and their names. No agitation. Was able to play Italian cards today.
- 4.Intake: Unable to tolerate PO intake so he had a G tube inserted. Thus far has been tolerating feeds without reported nausea, diarrhea, reflux or bloating.
- 5.Bleeding: A few nights ago had oral bleeding that resolved with TXA 1g, now has oral TXA mouthwash TID. He also suctions periodically blood tinged mucous or saliva. No significant bleeding.
- 6.Bowels: Reports they do not think he has had a BM since admission. As per RN notes, last BM was Aug 27th.

Review of symptoms negative for pain, dyspnea, cough, diarrhea.

PAST MEDICAL HISTORY:

?Atrial fibrillation - not on any medications according to daughter-in-law, Tanya

Remote history of ?TIA

Gout

Hearing impairment, no hearing aids

HOME MEDICATIONS:

None

HOSPITAL MEDICATIONS:

Acetaminophen 1000mg po TID PRN

Hydromorphone 0.5mg q1h PRN for pain

Salinex nasal spray

TXA mouthwash TID swish and spit or paint

Ondansetron 4mg IV TID PRN

ALLERGIES:

NKDA

Diagnoses :	Drug-induced gout, ankle and foot(M10.27), Atrial fibrillation, unspecified(I48.90), Transient cerebral ischaemic attack, unspecified(G45.9), Unspecified dementia(F03)			

FUNCTIONAL ASSESSMENT:

Prior to admission had moved into long term care in March 2025. Ambulated with a walker, was mostly independent but received some support from LTC when needed for ADLs such as bathing. Family primarily managing iADLs. Since being in hospital needing help with most ADLs, in the context of having the NG tube and now a recently inserted G tube, ambulating with walker. Sons have been helping him get into chair at bedside. Primarily using urinal instead of getting up to washroom.

SOCIAL HISTORY:

Born in Italy, primarily Italian speaking. Hearing impairment. His wife died 17 years ago. Has 3 sons (Tony, Greg and Aldo). Multiple grandchildren. Retired electrician. No active substance use reported.

INVESTIGATIONS:

Labs: Hgb 77 (stable). Cr 61.

CT-HEAD&NECK (Aug 27):

Suboptimal study.

There is a large oropharyngeal mass centered in the base of tongue with near focal obliteration of the oropharyngeal airway.

Multiple metastatic left sided neck nodes. Some with early features of extracapsular extension.

The overall appearance favours primary mucosal squamous cell carcinoma with lymphadenopathy. The differential diagnosis could include a lymphoproliferative disorder.

It measures approximately 5.9 x 3 x 6 cm

CT-CHEST:

There are no mediastinal nodules or masses.

No lymphadenopathy within the thorax. A nodal conglomerate in the left lower neck was partially imaged. Please refer to uncommitted head and neck CT for further detail.

No thoracic metastatic disease.

Mild progression of reticular interstitial lung abnormalities. For attention on follow-up.

PHYSICAL EXAM:

O2 97% on RA

Sleeping through most of our visit, woke easily to voice. Calm, pleasant, appears comfortable. Muffled speech. Small amount of dark brown tinged sputum. No audible stridor while awake but mild snoring when asleep. No resp distress, no audible secretions. No signs of discomfort.

PALLIATIVE PERFORMANCE SCALE: 40-50%

PROGNOSIS: Uncertain, need further information for accurate prognostication. Family reporting rapid growth of mass is more concerning for a rapid trajectory.

SUBSTITUTE DECISION MAKER:

Reported that POA for personal care is joint sons Tony and Greg (form not available to review today)

GOALS OF CARE:

Unable to assess directly with Lino as he was fatigued after being out of bed most of the afternoon. I explored illness understanding with his sons Tony and Greg with consent. Aware that mass is likely to be malignant, and Lino himself is aware of this "he knows it is serious". They are uncertain what to expect in the future. Lino is described as "a very get up and go positive attitude", he has told his sons "don't worry I'll be

fine just watch me and tell me what I need todo". Values independence and dignity, but also voiced that doing what he can to live longer is important. Everyone is still processing the news from last week.

Code status: Joint POA's Tony and Greg said they had discussed with dad and agreed that aggressive or invasive measures such as CPR and intubation would not be within his wishes as he is not someone who would wish to be in hospital bedbound for a prolonged period of time. At present Lino's presumed full code status and according to chart GOC on admission with patient "We had a thorough conversation regarding patient's wishes and goals if this is biopsy confirmed to be malignancy. At this time the patient wished to proceed with all possible life preserving measures." Not able to address with patient directly today.

ASSESSMENT:

In summary, Mr. Lanzillotta is a 94 yo man with newly diagnosed left Oropharyngeal Mass and metastatic lymphadenopathy suspicious for malignancy with moderate to significant oropharyngeal narrowing, biopsy results pending. Recent G tube insertion for nutrition.

I was asked to see for same day weekend consult to assist with goals of care, though family did not have specific questions for me today and rather are waiting for further medical information. Symptoms are relatively minimal and well managed at the present time.

PLAN:

1.Constipation: Last BM date unclear but reports no BM since admission. No signs/symptoms of obstruction and minimal intake x1 week. Recommend bisacodyl suppository PRN x1 followed by asneeded oral bowel regimen. If not effective, consider AXR to assess fecal loading.

2.Oral bleeding: On oral TXA mouthwash. Consider biotene oral spray PRN to assist with dry mouth.

3.?Delirium: I wonder if the sleep wake cycle reversal and mild confusion could be a mild hypoactive delirium. Reports of mild restlessness last night but no severe agitation. We discussed non pharm measures such as frequent reorientation, cognitive stimulation in day time, avoiding naps, being near window, calm setting, optimize bowels, using pocket talker. Will add melatonin 5mg po qHS nightly to start. I spoke with ENT MRP team and they would prefer we not add additional PRN for sleep/restlessness unless needed.

4.Goals of Care: See above. Lino was too fatigued to participate in conversation today, with consent spoke to joint POAs for personal care Tony and Greg. Good illness understanding. Will benefit from further information delivery once available such as expected trajectory, if there is a risk of sudden respiratory or vascular compromise, biopsy results, etc. to facilitate further conversations. Thus far goals have been medically active with patient stating he would want all life preserving measures. As per two sons, they all decided code status of DNR aligned with values. I have updated ENT team but would recommend confirming with patient directly tomorrow, therefore I did not update the order sheet tonight.

Please note: Lino is primarily Italian speaking and has hearing impairment, recommend using translation and pocket talker.

Palliative Care will continue to follow, please page if urgent issues

Effective Date: 09/15/2025 12:48 Type: Family/Resident Involvement

Data : Writer spoke with a Medisystem pharmacy representative at 1000hrs and informed writer that she would leave a message with
representative Jordan who would call back

Action : Writer spoke with Jordan from Medisystem pharmacy at 1230hrs- concern made by daughter Maria has been followed up with and
has spoken with resident's daughter over the telephone.

Response :

Author:Kimberly Martinez RESP - Nursing - Registered Practical Nurse

Signature: _____

Effective Date: 09/13/2025 21:34 Type: Family/Resident Involvement

Data : POA (Maria) called the unit and informed US that they tried to pick up resident's medications at the nearest pharmacy where they
currently are (1000 Golf links road, Ancaster - shoppers drug mart), but they were being charged around \$19 by the pharmacy as per POA. As
per POA, they were never charged when medications were being transferred there during LOA.

Action : US called the pharmacy and asked regarding the issue. As per emergency hours staff on medisystem, they cannot access or do any
dispute to the charge as the regular pharmacist was not in during the weekend, as they were the only one who can access it and answer the
issue. As per pharmacy, to call back on Monday and ask regarding the charge and that they will also leave a note for the regular pharmacist.
US informed POA Maria.

Response : Note left in the communication book for Monday, September 15, 2025, to follow up with pharmacy. Please follow up. Also, to
inform POA when follow up is done.

LATE ENTRY

Note Text : Palliative follow up and family meeting

91M CHF, CAD

mar and chart reviewed

family meeting w Greek interpreter, pt, pt's wife, pt's 2 kids Joanne and George

started in the board room, then due to pt not feeling comfortable sitting in his chair, moved back to his bedroom without the interpreter after

pt was asking what was the point of this meeting, did not remember last time agreeing to it

reviewed purpose was to understand his wishes to ensure they are followed, is of sound mind thus want to respect this

pt talked about his childhood, not wanting to be abandoned, similar as previous, mistrust of others and the med system due to childhood

trauma and hardships he unfortunately witnessed and experienced during the war

discussed goals and values

discussed range from full code, to ICU only, to ward level only, to some interventions, to no transfer out, to comfort range

he stated he wished for us to "bring me back to life of course"

we reviewed that unfortunately most cases are not able to bring back to the way patients were before

often would have changes in independence, ability to communicate, etc

he stated if he is not the same as before, more dependent, then he "wants a medicine injected to end it"

George stated he has explained to his dad likelihood of ribs being broken, etc, dad has stated clearly that he wants to try, and if he is not the same, then they will not continue life support

we discussed that this is a difficult scenario for many families, to stop life support, George stated that pt has lived a full life, they understand this, and would be comfortable letting him go at that time. For now wish to honour his wishes

Joanne worried about dad's ability to understand the full scope of this, stated he has a grade 4 level education, had previously declined cancer

Gender : M

Date :

Date of Birth : 01/31/1934

Physician : GOLDSTEIN, MARK LARRY

Pharmacy : MediSystem Toronto IMM

Allergies : Tomato

Diagnoses : Delirium, unspecified(F05.9), Congestive heart failure(I50.0), Cervical disc disorder with myelopathy(M50.0), Disorders of initiating and maintaining sleep [insomnias](G47.0), Benign hypertension(I10.0), Hyperplasia of prostate(N40), Low back pain(M54.5), Urinary tract infection, site not specified(N39.0), Heartburn(R12), Examination of eyes and vision(Z01.0), Constipation(K59.0)

treatment, spinal surgery, etc thus does not think he would actually want the aggressiveness of a code

pt stated he does not wish to talk about this anymore, wanted to go back to his room

went back together

conversation continued without the interpreter, we discussed that given this, will continue full code, also up to the practitioner at the time to make the decision to run a code or not depending on the situation

main topic of conversation after was taking pt home or not

George stated that everyday pt calls him to say he hates being away from home, doesn't like the strangers caring for him, wants to go home

Also complained of strangers/PSWs before

George shared that he wants to honour his dad's wishes as he's worried dad will die in a LTC which is not what he wants, and George will regret not trying

Joanne worried about caregiver burnout, stated George was exhausted before, taking care of both mum and dad

mum had previously "set the kitchen on fire, didn't call for help"

Joanne not able to help as much as she has her own family and work

George planning on going back to work soon as well

they are thinking about finances, feel that if they are able to use the funds they are currently paying for the LTC bed, then can hire some private care as well

we discussed the pros and cons of going home vs staying here

pt fluent, no distress

quite circumferential as before, does seem to be answering questions to his baseline

has some understanding, but repeatedly stating he wants to be "brought back to life of course" thus does not have full understanding of what the process of a full code is like

++ support provided

fairly tense from the minute I walked into the room

George asked the interpreter to "do your job, so, interpret", was in disagreement twice

Joanne and George in disagreement, patient yelling "stop, stop" in between

++ listening

stated several times that both George and Joanne have done an excellent job caring for dad, representing him, have their respective perspectives, not easy as taking care of mum as well

at the end of the day we all want the same, best care for the pt

will continue full code status

will support either decision to stay vs return home, reassured George it is not our role to stop or make a decision for a patient, just to offer all sides and options

will continue to follow for support which George and Joanne are happy with

Note Text : Resident rang call bell around 1745 while seating in the toilet. Writer answered the call bell. Resident asked to be cleaned as they had a BM. Writer informed resident that they will find a staff member to come and assist. While writer went to look for assigned staff when resident rang the call bell immediately after writer stepped out of the room. Assigned staff was helping another resident. Writer went and inform resident that staff will be coming to assist. Resident started shouting and yelling at writer. Shouting "are you stupid. Clean my ass. You do understand English. You do not speak English. Clean my ass you work for me". Writer informed resident not use inappropriate language. Writer helped clean resident. Resident had a XL BM. Resident thanked writer after cleaning.

Note Text : Palliative care follow up

84M CHF, CAD, stroke

mar and chart reviewed

seen alone then spoke w son Mark by phone

feeling good, denied all symptoms

reading the paper, telling me about what he's been reading about

remembers that I'm a doctor here

Markstated he feels dad is "sharper than ever"

had even updated family on the death of one of his friends that they didn't know about

it's been 5 months since an admission

aware he's still very vulnerable, susceptible, but happy to take the good days

smiling, no distress, answering appropriately

sitting in his wheelchair

doing well at this time, family grateful for care by all

will cont to follow intermittently

Resident Name : PASTERNAK, ANNIE (288467)

Location : 2 215 A

Admission 06/29/2022

Medical Record # : 5646 862 994KE

Gender : F

Date :

Date of Birth : 10/14/1931

Physician : HALL, ALISON

Pharmacy : MediSystem Toronto IMM

Allergies : No Known Allergies

Diagnoses : Other hyperlipidaemia(E78.4), Stroke, not specified as haemorrhage or infarction(I64), Benign hypertension(I10.0), Atrial Fibrillation, Unspecified(I48.90), Dementia in Alzheimer's disease, unspecified(F00.9), Osteoporosis, unspecified(M81.9), Acute cholecystitis(K81.0), Resistance to vancomycin(U83.0)

13. Vitamin B12 1000mcg daily

14. Prolia 60mg subcut q6months for osteoporosis

15. Acetaminophen 500mg to 1000mg q6h po prn pain

16. Diclofenac 1.16% gel to neck and shoulders bid prn for pain

17. Lactulose 30mL po qhs prn for constipation

Allergies: NKDA

Diet: She is on a regular type, regular texture, thin fluids diet.

Mobility: Previously walked using a rollator, now using wheelchair

Continence: toilets on her own. She is usually continent of bladder and bowel.

O: Appears well, smiling, alert, good eye contact, responding to all questions but often nonsensical.

BP: 141 / 68 ; HR: 67

Wt: 50kg (stable - 50.1 Kg in Sept 2024)

Resp: Clear, no wheezes, no crackles

CVS: N S1S2, irreg, no murmurs

Abdo: Soft, non-tender

Ext: no edema.

Labs:

- Blood work completed 08/01/2025.

- Creatinine 68; eGFR 72. Sodium 138. Potassium 4.1.

CBC: hemoglobin 89; WBC 7.2; platelets 179; RBC 2.98; MCV: 89.9

A/P:

1. Dementia with BPSD (irritability and paranoia). History of NMS while using low-dose risperidone (0.25 mg) and Loxapine PRN therefore not on any antipsychotic medications. Per Dr. Reynolds, may increase Sertraline to 200mg if needed (max dose).

2. A. Fib: Apixaban for stroke risk reduction and Bisoprolol for rate control.

3. HTN: controlled.

4. Osteoporosis: on Prolia and vit D for fracture risk reduction.

5. CKD: eGFR 72, doing well for age

6. Normocytic Anemia, ? ACD, Taking B12 and ferrous fumarate - Re-check CBC, b12 and ferritin

Physician :	HALL, ALISON	Pharmacy :	MediSystem Toronto IMM		
Allergies :	No Known Allergies				
Diagnoses :	Benign hypertension(I10.0), Osteoporosis, unspecified(M81.9), Cardiovascular disease, unspecified(I51.6), Congestive heart failure(I50.0), Atrial Fibrillation, Unspecified(I48.90), Cerebral infarction, unspecified(I63.9), Hemiplegia of unspecified type of unspecified [unilateral] side (G81.99), Benign paroxysmal vertigo(H81.1), Asthma, unspecified, without stated status asthmaticus(J45.90), Chronic obstructive pulmonary disease, unspecified(J44.9), Generalized and unspecified atherosclerosis(I70.9)				

Effective Date: 09/25/2025 18:48 Type: Behaviour - Responsive Behaviour

Type of Behaviour : at approximately 15:20 resident in her w/c was passing by co-res(AP)in the TV lounge when AP tried to kick resident. Resident then grabbed at AP doll that she was carrying. No physical contact noted with either resident. Incident was witnessed by RAI staff who then intervened and separate each resident.

Antecedent/Triggers : co-res(AP)kicked at resident while she was passing by in the TV lounge

Describe the behaviour : at approximately 15:20 resident in her w/c was passing by co-res(AP)in the TV lounge when AP tried to kick resident. Resident then grabbed at AP doll that she was carrying. No physical contact noted with either resident. Incident was witnessed by RAI staff who then intervened and separate each resident.

Disruptiveness (Data)/Consequences to the behaviour : resident grabbed at co-resident(AP) doll she had with her.

Interventions (review/update care plan) (Action) : both resident was kept seated away from each other during the shift

Change in medication : n/a

What are the risks and causes : its possible that both resident could get hurt if there was physical contact

Outcome(s)(Result) : no further confrontation. both resident monitored and kept away from each other during the shift. No further confrontation noted between each resident at this time

Substitute Decision Maker notified (if not, explain) : n/a

Effective Date: 09/16/2025 12:48 Type: Physician Note

LATE ENTRY

Note Text : Resident seen in hallway

Advise her urinary concerns are a little better, but still requesting the same seat cushion as her roommate

I spoke with Rodalyn from rehab

She advises that, for the specific wheelchair the resident has, that cushion does not fit it

She had needed a new one, the best one for her wheelchair was ordered, but she had not agreed to pay for it for some time

Now paid for and received, but resident does not believe them that she cannot have the exact same as her roommate.

I relayed the above to the resident, who shook her head and rolled her eyes, saying "no, no"

A/P: Resident insight into situations where she cannot have exactly as she wants appears poor and results in denial and refusal to accept ? personality trait vs. BPSD related to cognitive impairment

Also known to lash out at other residents

95F dementia

mar and chart reviewed

at her baseline no nursing concerns

will often be mumbling in Portuguese

not good with Google translate

will sit in her chair, wheel herself around

BM yesterday

eating

no distress or issues

stable, comfortable

possibly some very gentle decline if mumbling is consistently less clear, but difficult for me to assess as I do not understand Portuguese and

patient has never been able to respond yes/no to Google translated questions before

will touch base with family next time to ask if they've noticed any changes in her communication

Data : resident being monitored for health and wellness.

Action : Resident received a phone call from her daughter @09.00am and expressed a wish to speak with resident . Following the conversation, the daughter reported that the resident stated she had not slept since 4:00 AM and complained of pain inside of her vaginalarea.

The daughter requested that the prescribed cream be applied cautiously, as directed by the attending physician. Writer informed the daughter that the nursing staff would follow the physician's instructions accordingly.

Later in the shift, theresident was observed eating and drinking well and did not voice any complaints of pain or discomfort upon assessment. Abdomen was soft and non-tender to palpation.

Resident is currently resting in bed in a comfortable position.

Effective Date: 09/18/2025 13:22 Type: Family/Resident Involvement

Data : Spoke with resident's daughter Mari-Jo. Informed of Covid-19 positive result. Daughter also informed that resident will have to remain in isolation for 10 days; that resident will receive all care including meals in her room. Daughter was also advised to refrain from visiting home if she is unwell. Daughter informed that she will need to follow additional precaution measures when she visits when she is well. Daughter also gave consent for antiviral Paxlovid for Covid-19 to be initiated.

Action : Writer informed daughter that a note from pharmacy was received and stated that the SL Ativan is not covered by OHIP and they have to pay. Daughter demanded that resident be given ativan as they are restless and anxious since this is a new environment. Writer tried to explain that pharmacy will deliver the medication when they receive a payment. Daughter stated that they spoke to pharmacy and was informed that the medication will be sent. Daughter became very upset and started yelling at writer saying this is annoying, why are you stupid. Writer apologized for the miscommunication that could have happened between the pharmacist and the daughter. Writer assured family member that the MD will be called to get an STAT order for anxiety pill. MD called at 2125 and informed of the above mentioned. MD gave a STAT order for ativan 1mg PO. Nurse Manager informed of the above. Medication was administered at 2130. Family member informed that ativan was given. Family was thankful of the update. Stated they will call the pharmacy in the morning for clarification. Family member asked what time does pharmacy deliver medication. Writer informed family member that medication is delivered in the evening everyday. Resident is currently resting comfortably in bed. Monitoring in progress.

Resident Name :	SUTHERLAND, MORRIL (288582)	Location :	5 501 A	Admission Date :	07/04/2025
Medical Record # :	5483 084 785GV	Gender :	F	Date of Birth :	08/24/1957
Physician :	SIDLOFSKY, RICHARD	Pharmacy :	MediSystem Toronto IMM		
Allergies :	No Known Allergies				
Diagnoses :	Type 2 diabetes mellitus without (mention of) complications(E11.9), Progressive spinal muscular atrophy(G12.21), Nontoxic single thyroid nodule(E04.1)				

Effective Date: 09/25/2025 14:14 Type: Family/Resident Involvement

Data : Resident approached writer 2 weeks ago re: having a shower x 4 a week.

Action : The writer informed the resident that she is only allowed x 2 showers a week like the rest of the residents. Today she talked to the writer that she ordered a PSW from Agency to give her a shower x 2 a week(Wednesdays and Fridays).

Response : A PSW from the agency came and gave her a shower. No complaints were voiced when asked. She is her usual self. Will continue to monitor. ADOC made aware. Care plan updated.

68F ALS

mar and chart reviewed

seen alone

following to build rapport then ultimately to discuss her ALS related GOC and future disease progression info

nursing staff report she has been the same

will sometimes grimace but will always decline pain or symptoms

stated comfortable with me, no symptoms of discomfort for her

she just had physio, telling me about the exercises, strengthen shoulders and neck today

stated due to her weakness, often needs to use her legs to help her arms, which then causes her back to twist and feel funny

goes to PT once weekly which she enjoys

telling me about her childhood in the carribeans

beautiful, 30mins walk from the ocean, lived by a ravine

dad was a jack of all trades which she admired greatly, mum cooked and she became close to mum through learning to cook

grew a lot of their foods, all sorts of veg and plants, delicious whole foods

she misses this

loves nature in general

previously lived by lake Ontario in Toronto, could see the lake from her bedroom, went walking or biking daily

very athletic before, loves the outdoors

it makes her sad that almost suddenly she lost her physical ability

feels that being in nature helped her mental health a lot

starting to talk about this sense of loss

fluent, smiling, answering appropriately

remembers me but not my role or name

sitting in bed

supportive conversation, goal is to slowly open up more, build rapport

will follow up next week

Note Text : On call note:

Nurse called

- Since returning from hospital on Wednesday, more lethargic and oral intake worsening. Today responsiveness is minimal, very sleepy, and appears weak.
- Mild fever. Possible mild cough, unclear.
- Recent upper gastrointestinal bleeding: vomiting has stopped. Black stools were decreasing and now appear to have stopped.
- Blood sugar was low at 5.5. Previously running high; long-acting insulin increased from 12 units to 14 units.
- No power of attorney. Under the care of a Public Guardian and Trustee.

Diagnoses:

- Diabetes.
- Upper gastrointestinal bleeding - resolved with Pantoprazole 40mg BID).

Next Steps for Management:

- Diabetes: give long-acting insulin 14 units. Give short-acting insulin 2 units instead of 4 units.
- Fever NYD: Start azithromycin 500 mg once on day one, then 250 mg daily for four days thereafter.
- Change of health status: Begin palliative care treatments as follows:

1. Metoclopramide Hydrochloride ML (Injection) 5mg/ml INJECT 2ML (=10MG) SUBCUTANEOUSLY EVERY 6 HOURS WHEN NEEDED FOR NAUSEA / VOMITING [LU:48]

2. Acetaminophen SUP (Suppository) 650mg UNWRAP AND INSERT 1 SUPPOSITORY IN THE RECTUM EVERY 6 HOURS FOR PAIN AND / OR FEVER(Indications for Use: pain and fever)

3. HYDROMORPHONE Hydrochloride 2mg/ml INJECT 0.125ML (0.25MG) SUBCUTANEOUSLY EVERY 1 HOUR WHEN NEEDED FOR DYSPNEA/ PAIN

4. Haloperidol ML (Injection) 5mg/ml INJECT 0.1ML (0.5MG) SUBCUTANEOUSLY EVERY 1 HOUR WHEN NEEDED FOR AGITATION/ NAUSEA

Effective Date: 09/24/2025 12:26 Type: Physician Note

Note Text : Back from hospital after assessment for upper G.I. bleeding yesterday.

Summary from hospital as follows:

- Upper Gastrointestinal Bleed (UGIB): Patient presented with coffee ground emesis and melena, consistent with UGIB, likely from peptic ulcer disease (PUD) or gastritis. Variceal bleed is less likely due to absence of cirrhosis, ascites, or liver dysfunction. Patient is hemodynamically stable without abdominal pain. Management includes IV pantoprazole, GI consult for endoscopy in the morning, NPO after midnight, and obtaining consent for endoscopy.
- Anemia: Likely secondary to blood loss from UGIB. Initial haemoglobin (Hb) was 66; patient received 2 units of PRBC. Ongoing monitoring with a target Hb greater than 70.
- Leukocytosis with Neutrophilia: Could be reactive or infectious. No clear localized infection, though there are some poorly defined constitutional symptoms. Blood and urine cultures, viral swabs, and chest X-ray have been ordered.
- Hyperglycaemia from Type 2 Diabetes Mellitus (T2DM): Admission glucose was 21.7, now improved to 13.0 after insulin administration. Hyperglycaemia likely due to missed insulin doses; insulin sliding scale restarted.

Note Text : S: Nurse came down to second floor to request I assess this patient on a Tuesday

Resident was seen with private caregiver and daughter on iPad calling from Quebec

2 issues:

1. Cough;
 2. decreased hearing with non-functioning hearing aids
- Concern for ear infection or cerumen impaction

Past Medical History:

- Hearing aids in use; currently not hearing well despite that
- Relevant social history: Daughter involved in care; resides in Quebec

Objective:

- General: Alert
- Respiratory: No respiratory distress; breathing quietly without difficulty
- ENT: Bilateral cerumen impaction, no signs infection
- Chest: Clear air entry bilaterally; no crackles or wheezes; transmitted upper airway sounds

Assessment & Plan:

1. Bilateral cerumen impaction
 - Trial Murine ear drops BID; warm-water bulb irrigation after to wash out wax (counselled on technique);
 - thereafter consider weekly single drop of oil to canals to keep wax soft (counselled)
 - Follow-up: MD reassess in 1 week to confirm clearance; if not cleared, proceed with syringing or curetting (counselled)
 - Equipment: Syringing kit available in nurse's room (confirmed with nurse Katherine)
 - Orders placed in chart for drops and irrigation supplies

2. URI

- Diagnosis: URI
- Expectant management

-A. Hall

Author:Dr. Alison Hall RESP - Medical Services - Physician

Signature: _____

Effective Date: 09/24/2025 12:18 Type: Physician Note

Note Text : Quarterly medication review completed. Only slight wax in ears but hearing adequately. Recommend against trying to flush her ears with water at this time.

Medications as follows:

- Amlodipine 5 mg: 1 tab PO daily – hypertension
